

December 23, 2024

The Honorable Mayor,
City Council and City Manager
City of Fort Worth, Texas

Ladies and Gentleman,

The Public Funds Investment Act (Chapter 2256, Texas Government Code Sec. 2256.023) requires the entity's Investment Officers to prepare and submit to the governing body, a written report of investment transactions for all funds subject to the requirements of the Public Funds Investment Act (the City's General Investment Portfolio).

The attached Investment Report covers the quarter ending September 30, 2024 (Quarter to Date or "QTD"). The report describes the economic trends affecting the City's investments along with a summary of the City's investment performance during the reporting period.

Accompanying the General Investment portfolio report are the quarterly investment reports of the Fort Worth Permanent Fund Trust, the Other Post-Employment Benefits ("OPEB") Trust, and the Fort Worth Employees Retirement Fund. Each section has been bookmarked within the PDF for ease of reference.

Portfolio	QTD %	FYTD %	Prior FYTD %
General	3.789	4.614	4.631
Permanent Fund	4.230	15.770	8.650
OPEB	5.900	17.840	5.220
Retirement	4.050	N/A*	N/A*

FYTD = Fiscal Year to Date

* The Retirement Fund reports on a calendar quarter and annual basis. The one-year performance (net of fees) as of September 30, 2024 (10/01/2023-09/30/2024) was 16.03% compared to 8.30% over the same period in the prior year (10/01/2022-09/30/2023).

Prior reports are located on the City's website within the Finance Department webpage.

As always, we are happy to answer any questions.

Respectfully Submitted,

Anthony Rousseau, CPA, CTP, CPFO, CGFO
Deputy Finance Director

This information is for the sole purposes of the client and is not intended to provide specific advice or recommendations. Please review the contents of this information carefully. Should you have any questions regarding the information presented, calculation methodology, investment portfolio, security detail, or any other facet of this information, please feel free to contact us.

Public Trust Advisors, LLC (Public Trust) statements and reports are intended to detail our investment advisory activity as well as the activity of any client accounts managed by Public Trust. The custodian bank maintains the control of assets and executes and settles all investment transactions. The custodian statement is the official record of security and cash holdings transactions. Public Trust recognizes that clients may use these reports to facilitate record keeping; therefore, it is recommended that the client reconcile this information with their custodian bank statement. Many custodians use a settlement date basis that may result in the need to reconcile due to a timing difference. The underlying market value, amortized cost, and accrued interest may differ between the custodian and this statement or report. This can be attributable to differences in calculation methodologies and pricing sources used. Please contact your relationship manager or call us at (855) 395-3954 with questions regarding your account.

Public Trust does not have the authority to withdraw funds from or deposit funds to the custodian. Our clients retain responsibility for their internal accounting policies, implementing and enforcing internal controls, and generating ledger entries or otherwise recording transactions. The total market value represents prices obtained from various sources; it may be impacted by the frequency at which prices are reported, and such prices are not guaranteed. Prices received from pricing vendors are generally based on current market quotes but when such quotes are not available, the pricing vendors use a variety of techniques to estimate value. These estimates, particularly for fixed-income securities, may be based on certain minimum principal amounts (e.g. \$1 million) and may not reflect all the factors that affect the value of the security including liquidity risk. The prices provided are not firm bids or offers. Certain securities may reflect N/A or unavailable where the price for such security is generally not available from a pricing source. The market value of a security, including those priced at par value, may differ from its purchase price and may not closely reflect the value at which the security may be sold or purchased based on various market factors. The securities in this investment portfolio, including shares of mutual funds, are not guaranteed or otherwise protected by Public Trust, the FDIC (except for certain non-negotiable certificates of deposit), or any government agency unless specifically stated otherwise.

Clients may be permitted to establish one or more unmanaged accounts for the purposes of client reporting. Public Trust defines an unmanaged account as one where the investment direction remains the sole responsibility of the client rather than the Investment Manager. These accounts do not receive ongoing supervision and monitoring services. The Investment Manager does not make any investment recommendations and may not charge a fee for reporting on these accounts. The primary purpose for this service is to include unmanaged accounts owned by the client in the performance reports provided by the Investment Manager. The Investment Manager assumes no liability for the underlying performance of any unmanaged accounts or assets, and it is the client's sole responsibility for the accuracy or correctness of any such performance.

Beginning and ending balances are based on market value plus accrued interest on a trade date basis. Statements and reports made available to the end user either from Public Trust or through the online reporting platform may present information and portfolio analytics using various optional methods including, but not limited to, historical cost, amortized cost, and market value. All information is assumed to be correct, but the accuracy has not been confirmed and therefore is not guaranteed to be correct. Information is obtained from third party sources that may or may not be verified. The data in this report is unaudited and is only applicable for the date denoted on the report. Market values may change day-to-day based on numerous circumstances such as trading volume, news released about the underlying issuer, issuer performance, etc. Underlying market values may be priced via numerous aspects as certain securities are short term in nature and not readily traded. Performance results are shown net of all fees and expenses and reflect the reinvestment of dividends and other earnings.

Many factors affect performance including changes in market conditions and interest rates and in response to other economic, political, or financial developments. Investment involves risk including the possible loss of principal. No assurance can be given that the performance objectives of a given strategy will be achieved. Past performance is no guarantee of future results. Any financial and/or investment decision may incur losses.

The investment advisor providing these services is Public Trust Advisors, LLC, an investment adviser registered with the U.S. Securities and Exchange Commission (SEC) under the Investment Advisers Act of 1940, as amended. Registration with the SEC does not imply a certain level of skill or training. Public Trust is required to maintain a written disclosure brochure of our background and business experience. PORTFOLIO ALLOCATION OVER TIME (CONSOLIDATED) - REPORT PERIOD: 7/1/13 TO 9/30/24 AGG453079 FORT WORTH PERMANENT FUND - CONS

ALLOCATION OVER TIME (BY CLASS)

CLASS	ENDING MARKET VALUE ¹	CURRENT PORTFOLIO ALLOCATION
CASH ALTERNATIVES	8,686,346	9.58%
FIXED INCOME	32,606,112	35.95%
EQUITIES	42,102,905	46.42%
REAL ASSETS	1,518,745	1.67%
ALTERNATIVES	5,792,833	6.39%
SPECIALTY ASSETS	-	-
TOTAL PORTFOLIO	90,706,940	100.00%

¹ Values include Accrued Income.

ACCRUED INCOME - The interest the issuer of a security owes before the issuer actually makes the scheduled payment. Since the holder of the security is entitled to this payment, the total portfolio value should reflect this amount.

ALLOCATION - proportions of a portfolio's holdings are invested in the various asset classes.

ALPHA - Alpha measures the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by Beta. Alpha combines the volatility the portfolio's price has experienced relative to the market and the returns the fund has generated relative to the market, to define the "excessive risk" of the fund. A negative Alpha means a portfolio has underperformed its index relative to how much volatility has been shown.

ANNUAL YIELD - The current cash income received from investment in an asset class. Bonds provide yield in the form of interest payments and stocks through dividends. Fees are not included in the calculations.

ANNUALIZED RETURN - An annualized return is calculated using monthly returns that are geometrically linked to the account for compounding. Annualization does not occur until at least one year of performance data has been obtained.

ASSET CLASS - A broad category of assets with similar investment characteristics. Examples include cash, taxable bonds, non-taxable bonds, municipal bonds, US equities, international equities, etc.

ASSET STYLE - A broad category of securities with similar investment styles or company market capitalizations, usually distinctive from a market index. Examples include value, blend or core, and growth with respect to investment styles, and large-, mid-, and small-cap with respect to company market capitalizations.

ASSET SUBCLASS - A specific category of assets with similar investment characteristics within a broader asset class. Examples include technology, consumer staples, utilities, etc.

BEGINNING MARKET VALUE - The value of an investment portfolio at the beginning of the report period as shown at the top of the page, unless otherwise indicated elsewhere on the page. Only marketable securities are presented, so other types of assets, such as real estate, are not included. This may result in a dollar amount different from your accounting statement

BETA - Beta is a measure of the volatility of the fund's total returns to the general market as represented by a corresponding benchmark index of the fund. A beta of more than 1.00 indicates volatility greater than the market, and a beta of less indicates volatility less than the market.

CLASS - See Asset Class.

CONTRIBUTIONS/WITHDRAWALS - The net amount you have put in or taken out of the account, including payment of investment management fees. This amount may not match what is on your accounting statement due to the conversion of accounting data into investment data. Ask your service representative for further information.

CUMULATIVE RETURN - Cumulative return uses periodic returns and geometrically links them over time to form a total return achieved during a given time period. Cumulative returns for periods of time longer than 12 months are displayed in annualized form.

DOWN-SIDE CAPTURE RATIO - A measure of managers' performance in down markets relative to the market itself. A down market is one in which the market's quarterly return is less than zero.

DURATION - Measures the time horizon when a bond's yield will be realized. During that time, losses (gains) from price change will be offset by gains (losses) from reinvestment of coupon interest. See also Macaulay Duration.

ENDING MARKET VALUE - The value of your investment portfolio at the end of the report period. Only marketable securities are presented, so other types of assets, such as real estate, are not included. This may result in a dollar amount different from your accounting statement.

GAIN/LOSS - What a portfolio has gained or lost during the specified time period. This includes both realized (such as proceeds from a sale) and unrealized (such as accrued interest, dividends, and market price changes) gains or losses.

INFLATION - The appreciation in the level of prices for a given basket of goods over time.

JENSEN'S ALPHA - Measures the portfolio's annualized return against the portfolio's risk or volatility exposure.

MACAULAY DURATION - The average time to receipt of all the scheduled interest and principal payments on a bond. See also Duration.

MARKET VALUE - The market price of a holding multiplied by the number of shares. A portfolio's total market value is the summation of the individual holding values, plus cash balances, net of any debt balances.

MATURITY - The date the issuer of the bond will pay the holder of the bond the par value.

P/E RATIO - Shows the multiple of earnings at which a stock sells determined by dividing current stock price by current earnings per share.

R-SQUARED - A statistic that measures the reliability of alpha and beta in explaining the return of a manager as a linear function of the market.

REPORT PERIOD - Represents the date range for the data displayed in the performance report. More data may be available for the account, but is not included in the calculations.

RISK - The potential that the actual return from investment in an asset class will be different from its assumed return. Risk is measured statistically using standard deviation.

RISK-ADJUSTED RETURN - The return earned minus a fraction of the downside risk. The fraction of the risk subtracted depends on the investor's degree of risk aversion.

SHARPE RATIO - Sharpe ratio measures the additional return that an investor could expect to receive for accepting additional risk.

STANDARD DEVIATION - Standard Deviation is a statistical measure of the volatility of the investment's return. The higher the standard deviation, the greater its volatility has been.

STYLE - See Asset Style.

SUBCLASS - See Asset Subclass.

TREYNOR RATIO - The Treynor Ratio measures excess return per unit of risk. The Treynor Ratio relates the difference between the portfolio's return and the risk-free rate to the portfolio beta for a given time period. See also Sharpe Ratio.

UP-SIDE CAPTURE RATIO - Measures a manager's performance in up markets relative to the market itself. An up market is one in which the market's quarterly return is greater than or equal to zero.

WEIGHTED AVERAGE MARKET CAP - Represents the average value of the companies in a composite, measured by market price of outstanding stock, weighted by the percentage of the holding in a composite. This measure offers a more accurate view of the size of companies that make up the composite being reported.

WEIGHTED AVERAGE P/E - A position-weighted average which describes the relationship between the price of a portfolio's various stocks and their earnings per share.

WEIGHTED CASH FLOW - Weighs each cash flow by the duration of time it is held in the portfolio.

YIELD - The return to a bondholder who holds a bond until it matures.

YIELD TO MATURITY - A measure of the average return earned on a bond if held until maturity. It takes into account the bond's current market price, maturity date and interest payments. Yield to maturity is a measure of a bond's

internal rate of return, based on the assumption that all interest payments from the bond are reinvested at an interest rate equal to the bond's yield to maturity.

Blended Benchmarks and Index Definitions (cont.)

The benchmark performance shown is for illustrative purposes only and is not reflective of any investment. Index returns do not represent investment returns or the results of actual trading nor are they forecasts of expected gains or losses a portfolio might experience. Index returns reflect general market results, assume the reinvestment of dividends and other distributions, and do not reflect deduction for fees, expenses or taxes applicable to an actual investment. Comparisons to benchmarks have limitations because benchmarks have volatility and other material characteristics that may differ from those of the portfolio. Because of these differences, benchmarks should not be relied upon as an accurate measure of comparison. There is no guarantee that any of the securities invested in the portfolio are included in the Index. Past performance does not guarantee future results.

An index is unmanaged and unavailable for direct investment.

Cash Alternatives: Bloomberg 1-3 Month U.S. T-Bill Index: The Bloomberg 1-3 Year U.S. Treasury Index is the 1-3 Yr. component of the Bloomberg U.S. Treasury Index.

Fixed Income (Taxable, Investment Grade): Bloomberg US Aggregate Bond Index: The Bloomberg U.S. Aggregate Bond Index is a broad-based measure of the investment grade, US dollar-denominated, fixed-rate taxable bond market.

Fixed Income (U.S. Short Term Taxable): Bloomberg U.S. Aggregate 1-3 Year Bond Index: The Bloomberg U.S. Aggregate 1-3 Year Index is the one to three year component of the Bloomberg U.S. Aggregate Index, which represents fixed-income securities that are SEC-registered, taxable, dollar-denominated, and investment-grade.

Fixed Income (U.S. Intermediate Term Taxable): Bloomberg U.S. Aggregate 5-7 Year Bond Index: The Bloomberg U.S. Aggregate 5-7 Year Index is composed of the Bloomberg U.S. Government/Credit Index and the Bloomberg U.S. Mortgage-Backed Securities Index, and includes Treasury issues, agency issues, corporate bond issues, and mortgage-backed securities with maturities of 5-7 years.

Fixed Income (U.S. Long Term Taxable): Bloomberg U.S. Aggregate 10+ Year Bond Index: The Bloomberg U.S. Aggregate 10+ Year Index is unmanaged and is composed of the Bloomberg U.S. Government/Credit Index and the Bloomberg U.S. Mortgage-Backed Securities Index, and includes Treasury issues, agency issues, corporate bond issues, and mortgage-backed securities with maturities of 10 years or longer.

Fixed Income (High Yield, Taxable): Bloomberg US Corporate High Yield Bond Index: The Bloomberg High Yield Bond Index is an unmanaged index that includes all fixed income securities having a maximum quality rating of Ba1, a minimum amount outstanding of \$100 million, and at least one year to maturity.

Fixed Income (Developed Market Ex-U.S.): JPMorgan GBI Global ex-U.S. Index (Unhedged) in USD: The JPMorgan GBI Global ex-U.S. Index is an unmanaged index market representative of the total return performance in U.S. dollars on an unhedged basis of major non-U.S. bond markets.

Fixed Income (Emerging Markets): JPMorgan Emerging Markets Bond Index (EMBI) Global: The JPMorgan Emerging Markets Bond Index is a U.S. dollar denominated, investible, market cap-weighted index representing a broad universe of emerging market sovereign and quasi-sovereign debt. While products in the asset class have become more diverse, focusing on both local currency and corporate issuance, there is currently no widely accepted aggregate index reflecting the broader opportunity set available, although the asset class is evolving. By using the same index provider as the one used in the developed-market bonds asset class, there is consistent categorization of countries among developed international bonds (ex. U.S.) and emerging market bonds.

Fixed Income (Inflation Linked): Bloomberg Global Inflation-Linked Index: The Bloomberg Global Inflation-Linked Index covers eleven sovereign markets, quasi-sovereign issues in the Euro market and a full credit index in sterling.

Fixed Income (Preferred Stock): ICE BofAML Fixed Rate Preferred Securities Index: The ICE BofAML Fixed Rate Preferred Securities Index is designed to replicate the total return of a diversified group of

Blended Benchmarks and Index Definitions (cont.)

investment-grade preferred securities that must be investment-grade, based on an average of three leading ratings agencies: Moody's, S&P and Fitch. The Index is rebalanced on a monthly basis.

Fixed Income (Global): Bloomberg Multiverse Index: The Bloomberg Multiverse Index provides a broad-based measure of the global fixed-income bond market. The index represents the union of the Global Aggregate Index and the Global High-Yield Index and captures investment grade and high yield securities in all eligible currencies.

Fixed Income (Tax Exempt): Bloomberg U.S. Municipal Bond Index: The Bloomberg U.S. Municipal Bond Index is an unmanaged index composed of long-term tax-exempt bonds with a minimum credit rating of Baa.

Fixed Income (U.S. Short Term Tax Exempt): Bloomberg U.S. 3-Year Municipal Bond Index: The Bloomberg U.S. 3-Year Municipal Bond Index is the 2-4 year component of the Bloomberg U.S. Municipal Bond Index, an unmanaged index composed of tax-exempt bonds with a minimum credit rating of Baa.

Fixed Income (U.S. Intermediate Term Tax Exempt): Bloomberg Municipal Bond Intermediate (5-10) Index: The Bloomberg Municipal Bond Intermediate (5-10) Index represents municipal bonds with a minimum credit rating of at least Baa, an outstanding par value of at least \$3 million and a remaining maturity of five to ten years.

Fixed Income (U.S. Long Term Tax Exempt): Bloomberg U.S. 15-Year Municipal Bond Index: The Bloomberg U.S. 15-Year Municipal Bond Index is the 12-17 year component of the Bloomberg U.S. Municipal Bond Index, an unmanaged index composed of tax-exempt bonds with a minimum credit rating of Baa.

Fixed Income (Tax Exempt, High Yield): Bloomberg High Yield Muni Index: The Bloomberg High Yield Index covers the universe of fixed rate, non-investment grade debt. Pay-in-kind (PIK) bonds, Eurobonds, and debt issues from countries designated as emerging markets (e.g., Argentina, Brazil, Venezuela, etc.) are excluded, but Canadian and global bonds (SEC registered) of issuers in non-EMG countries are included. Original issue zeros, step-up coupon structures, and 144-As are also included.

Equities (Global): MSCI All Country World Index: The MSCI All Country World Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. The Index consists of 46 country indices comprising 23 developed and 23 emerging market country indices.

Equities Blend Benchmark: Equities benchmark is defined as 100% MSCI ACWI; prior to 1/1988 50/50 blend of MSCI EAFE & S&P 500.

Equities (US Large Cap): S&P 500: The S&P 500 Index consists of 500 stocks chosen for market size, liquidity, and industry group representation. It is a market value weighted index with each stock's weight in the Index proportionate to its market value.

Equities (U.S. Large Cap Growth): Russell 1000® Growth Index: The Russell 1000® Growth Index measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values.

Equities (U.S. Large Cap Value): Russell 1000® Value Index: The Russell 1000® Value Index measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

Equities (US Mid Cap): Russell Midcap® Index: The Russell Midcap® Index measures the performance of the 800 smallest companies in the Russell 1000 Index, which represent approximately 25% of the total market capitalization of the Russell 1000® Index.

Equities (Mid Cap Growth): Russell Midcap® Growth Index: The Russell Midcap® Growth Index measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher

Blended Benchmarks and Index Definitions (cont.)

forecasted growth values. The stocks are also members of the Russell 1000® Growth index.

Equities (Mid Cap Value): Russell Midcap® Value Index: The Russell Midcap® Value Index measures the performance of those Russell Midcap companies with lower price-to-book ratios and lower forecasted growth values. The stocks are also members of the Russell 1000® Value index.

Equities (US Small Cap): Russell 2000® Index: The Russell 2000® Index measures the performance of the 2,000 smallest companies in the Russell 3000® Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index.

Equities (U.S. Small Cap Growth): Russell 2000® Growth Index: The Russell 2000® Growth Index measures the performance of those Russell 2000 companies with higher price-to-book ratios and higher forecasted growth values.

Equities (U.S. Small Cap Value): Russell 2000® Value Index: The Russell 2000® Value Index measures the performance of those Russell 2000 companies with lower price-to-book ratios and lower forecasted growth values.

Equities (Developed Markets, ex-US): MSCI EAFE® Net (Dividends) Index (Europe, Australasia, Far East): The MSCI Europe, Australasia and Far East ("MSCI EAFE") Stock Net Index is an unmanaged group of securities widely regarded by investors to be representations of the stock markets of Europe, Australasia and the Far East. Calculations for EAFE use net dividends, which reflect the deduction of withholding taxes. Source: MSCI. MSCI makes no express or implied warranties or representations and shall have no liability whatsoever with respect to any MSCI data contained herein. The MSCI data may not be further redistributed or used as a basis for other indices or any securities or financial products. This report is not approved, reviewed or produced by MSCI.

Equities (Developed Market Ex-U.S.): MSCI EAFE Midcap Index: The MSCI EAFE Mid-Cap Index is an equity index which captures mid cap representation across Developed Markets in 21 countries around the world, excluding the US and Canada.

Equities (Developed Market Ex-U.S.-Small Cap): MSCI EAFE® Small Cap Index: The MSCI EAFE Small Cap Index currently consists of the following 21 developed market countries: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland and United Kingdom. The Index aims to capture 40% of the full market capitalization of the eligible small cap universe of companies of each country by industry. This is a range of 200-1,500 billion USD.

Equities (Emerging Markets): MSCI Emerging Markets: The MSCI Emerging Markets Index is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. The Index consists of the following 23 emerging market country indices: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Israel, Korea, Malaysia, Mexico, Morocco, Peru, Philippines, Poland, Russia, South Africa, Taiwan, Thailand, and Turkey. Source: MSCI. MSCI makes no express or implied warranties or representations and shall have no liability whatsoever with respect to any MSCI data contained herein. The MSCI data may not be further redistributed or used as a basis for other indices or any securities or financial products. This report is not approved, reviewed or produced by MSCI.

Equities (Emerging Market-Frontier Market): MSCI Frontier Markets Index: The MSCI Frontier Markets Index consists of 22 countries tracking the performance of a range of equity markets that have become accessible to global investors.

Real Assets: 50% FTSE E/N Dev 50% BB Commodity FTSE EPRA/NAREIT Developed Index is designed to track the performance of listed real-estate companies and REITs in developed countries worldwide.

Real Assets (Private Real Estate): NCREIF Private Real Estate Index: The NCREIF Private Real Estate Index is a quarterly time series composite total rate of return measure of investment performance of a very large pool of individual commercial real estate properties acquired in the private market for investment purposes only. All properties are held in a fiduciary environment.

Blended Benchmarks and Index Definitions (cont.)

Real Assets (Private Real Estate-Timberland): NCREIF Timberland Index: The NCREIF Timberland Index contains properties held in a tax-exempt, fiduciary setting.

Real Assets (Commodities): Bloomberg Commodity Index: The Bloomberg Commodity Index is a broadly diversified index comprised of 22 exchange-traded futures on physical commodities and represents 20 commodities weighted to account for economic significance and market liquidity.

Real Assets (MLPs): Alerian MLP Index: The Alerian MLP Index is a float-adjusted, capitalization-weighted index, whose constituents represent approximately 85% of total float-adjusted market capitalization, and is disseminated real-time on a price-return basis (AMZ) and on a total-return basis (AMZX).

Real Assets (Private Infrastructure): Burgiss Infrastructure Index: The Burgiss Infrastructure Index is a pooled quarterly time weighted rate of return series based on data compiled by the Burgiss Group, LLC (Burgiss) from over 250 private infrastructure funds formed after 1994. The return series is net of fees, expenses, and carried interest. The benchmark is issued on a quarterly basis, approximately 80 calendar days after quarter end. Index returns do not represent fund performance.

Alternatives (Global Hedge Funds): HFRI Fund Weighted Composite: The HFRI Fund Weighted Composite Index is a global, equal-weighted index of over 2,000 single-manager funds that report to HFR Database. Constituent funds report monthly net of all fees performance in US dollars and have a minimum of \$50 Million under management or a twelve (12) month track record of active performance. The HFRI Fund Weighted Composite Index does not include Funds of Hedge Funds.

Alternatives (Global Hedge Funds-Relative Value): HFRI Relative Value (Total) Index: The HFRI Relative Value Index represents Investment Managers who maintain positions in which the investment thesis is predicated on realization of a valuation discrepancy in the relationship between multiple securities. Managers employ a variety of fundamental and quantitative techniques to establish investment theses, and security types range broadly across equity, fixed income, derivative or other security types. Fixed income strategies are typically quantitatively driven to measure the existing relationship between instruments and, in some cases, identify attractive positions in which the risk adjusted spread between these instruments represents an attractive opportunity for the investment manager. Relative Value (RV) position may be involved in corporate transactions also, but as opposed to Event Driven (ED) exposures, the investment thesis is predicated on realization of a pricing discrepancy between related securities, as opposed to the outcome of the corporate transaction.

Alternatives (Global Hedge Funds-Macro): HFRI Macro Index: The HFRI Macro Index includes investment managers which trade a broad range of strategies in which the investment process is predicated on movements in underlying economic variables and the impact these have on equity, fixed income, hard currency and commodity markets. Managers employ a variety of techniques, both discretionary and systematic analysis, combinations of top down and bottom up theses, quantitative and fundamental approaches and long and short term holding periods. Although some strategies employ Relative Value (RV) techniques, Macro strategies are distinct from RV strategies in that the primary investment thesis is predicated on predicted or future movements in the underlying instruments, rather than realization of a valuation discrepancy between securities. In a similar way, while both Macro and equity hedge managers may hold equity securities, the overriding investment thesis is predicated on the impact movements in underlying macroeconomic variables may have on security prices, as opposed to Equity Hedge (EH), in which the fundamental characteristics on the company are the most significant are integral to investment thesis.

Alternatives (Global Hedge Funds-Event Driven): HFRI Event Driven (Total) Index: The HFRI Event Driven Index represents Event-Driven Investment Managers who maintain positions in companies currently or prospectively involved in corporate transactions of a wide variety including but not limited to mergers, restructurings, financial distress, tender offers, shareholder buybacks, debt exchanges, security issuance or other capital structure adjustments. Security types can range from most senior in the capital structure to most junior or subordinated, and frequently involve additional derivative securities. Event Driven exposure includes a combination of sensitivities to equity markets, credit markets and idiosyncratic, company specific developments. Investment theses are typically predicated on fundamental characteristics (as opposed to quantitative), with the realization of the thesis predicated on a specific development exogenous to the existing capital structure.

Alternatives (Global Hedge Funds-Equity Hedge): HFRI Equity Hedge (Total) Index: The HFRI Equity Hedge Index represents Investment Managers who maintain positions both long and short in primarily equity and equity derivative securities. A wide variety of investment processes can be employed to arrive at an investment decision, including both quantitative and fundamental techniques; strategies can be broadly diversified or narrowly focused on specific sectors and can range broadly in terms of levels of net exposure, leverage employed, holding period, concentrations of market capitalizations and valuation ranges of

Blended Benchmarks and Index Definitions (cont.)

typical portfolios. EH (Equity Hedge) managers would typically maintain at least 50% exposure to, and may in some cases be entirely invested in, equities, both long and short.

Alternatives (Global Liquid Alternatives): Wilshire Liquid Alternative Index: The Wilshire Liquid Alternative Index measures the collective performance of the five Wilshire Liquid Alternative strategies that make up the Wilshire Liquid Alternative Universe. The Wilshire Liquid Alternative Index is designed to provide a broad measure of the liquid alternative market by combining the performance of the Wilshire Liquid Alternative Equity Hedge Index, Wilshire Liquid Alternative Global Macro Index, Wilshire Liquid Alternative Relative Value Index, Wilshire Liquid Alternative Multi-Strategy Index, and Wilshire Liquid Alternative Event Driven Index. The objective of the Wilshire Liquid Alternative Index is to provide a representative baseline for how the liquid alternative investment category performed as a whole. The index weights are derived from the assets under management (AUM) for each constituent fund with caps on weighting applied at both category and strategy level.

Alternatives (Liquid Relative Value): Wilshire Liquid Alternative Relative Value Index: The Wilshire Liquid Alternative Relative Value Index measures the performance of the relative value strategy component of the Wilshire Liquid Alternative Index. Relative value strategies are focused on the valuation discrepancy in the relationships between markets or securities. The objective of the Wilshire Liquid Alternative Relative Value Index is to provide a broad measure of the relative value sub-strategy of the liquid alternative market. The index weights are derived from the assets under management (AUM) for each constituent fund with caps on weighting applied at both category and strategy level.

Alternatives (Liquid Macro): Wilshire Liquid Alternative Global Macro Index: The Wilshire Liquid Alternative Global Macro Index measures the performance of the global macro strategy component of the Wilshire Liquid Alternative Index. Global macro strategies predominantly invest in situations driven by the macro-economic environment across the capital structure as well as currencies and commodities. The objective of the Wilshire Liquid Alternative Global Macro Index is to provide a broad measure of the global macro sub-strategy of the liquid alternative market. The index weights are derived from the assets under management (AUM) for each constituent fund with caps on weighting applied at both category and strategy level.

Alternatives (Liquid Event Driven): Wilshire Liquid Alternative Event Driven Index: The Wilshire Liquid Alternative Event Driven Index measures the performance of the event driven strategy component of the Wilshire Liquid Alternative Index. Event driven strategies predominantly invest in companies involved in corporate transactions such as mergers, restructuring, distressed, buy backs, or other capital structure changes. The objective of the Wilshire Liquid Alternative Event Driven Index is to provide a broad measure of the event driven sub-strategy of the liquid alternative market. The index weights are derived from the assets under management (AUM) for each constituent fund with caps on weighting applied at both category and strategy level.

Alternatives (Liquid Equity Hedge): Wilshire Liquid Alternative Equity Hedge Index: The Wilshire Liquid Alternative Equity Hedge Index measures the performance of the equity hedge strategy component of the Wilshire Liquid Alternative Index. Equity hedge investment strategies predominantly invest in long and short equities. The objective of the Wilshire Liquid Alternative Equity Hedge Index is to provide a broad measure of the equity hedge sub-strategy of the liquid alternative market. The index weights are derived from the assets under management (AUM) for each constituent fund with caps on weighting applied at both category and strategy level.

Alternatives (Private Equity): Cambridge Associates LLC U.S. Private Equity Index®: The Cambridge Associates LLC U.S. Private Equity Index® uses a horizon calculation based on data compiled from more than 1,400 institutional-quality buyout, growth equity, private equity energy, and subordinated capital funds formed between 1986 and 2017. The funds included in the index report their performance voluntarily and therefore the index may reflect a bias towards funds with records of success. Funds report unaudited quarterly data to Cambridge Associates when calculating the index. The index is not transparent and cannot be independently verified because Cambridge Associates does not identify the funds included in the index. Because Cambridge Associates recalculates the index each time a new fund is added, the historical performance of the index is not fixed, can't be replicated and will differ over time from the day presented. The returns shown are net of fees, expenses and carried interest. Index returns do not represent fund performance.

Alternatives (Private Debt): Burgiss Private Debt Index: The Burgiss Private Debt Index is a pooled quarterly time weighted rate of return series based on data compiled by the Burgiss Group, LLC (Burgiss) from over 800 private debt funds (generalist, senior, mezzanine, and distressed debt), including fully liquidated partnerships, formed after 1986. The return series is net of fees, expenses, and carried interest. The benchmark is issued on a quarterly basis, approximately 80 calendar days after quarter end. Index returns do not represent fund performance.

CPI-Plus Benchmark: The Consumer Price Index (CPI) program produces monthly data on changes in the prices paid by urban consumers for a representative basket of goods and services.

Wealth & Investment Management offers financial products and services through affiliates of Wells Fargo & Company. Bank products and services are available through Wells Fargo Bank, N.A., Member FDIC ("WFB, NA").

WFB, NA has retained a third party (Informa Investment Solutions) to provide performance information included in your performance reports. Informa Investment Solutions ("Informa") calculates monthly returns by the Modified Dietz (approximated time-weighted return) or Daily Valuation Method (time-weighted return). For all securities, Informa calculates the total return. Total return includes market value appreciation or depreciation and any interest or dividends. Values reflected for publicly traded assets are derived from unaffiliated financial industry sources believed to be reliable. Values for non-publicly traded assets are derived using external sources and may be based on estimates. Assets for which a current value is unavailable from an external source may be valued at the last reported price, at par, or may be shown as having nominal or no value. Reported values may not reflect the price at which an asset may be sold. Asset values are updated as they become available from external sources and may be updated less frequently than statements are generated. Although asset values are obtained from sources deemed reliable, values should only be used for reference. Values indicated should not be used to calculate gain/loss ratios or for tax preparation purposes. Informa displays returns for periods less than 12 months as cumulative and annualizes returns for periods greater than or equal to 12 months.

Market Commentary, if provided, in this report was prepared by the investment management arm within Wells Fargo Wealth and Investment Management, a part of Wells Fargo Bank, N.A. Information and opinions have been obtained or derived from information we consider reliable, but we cannot guarantee their accuracy or completeness. Opinions represent WFB, NA's opinion as of the date of this report and are for general information purposes only. WFB, NA does not undertake to advise you of any change in its opinions or the information contained in this report. Wells Fargo & Company affiliates may issue reports or have opinions that are inconsistent with, and reach different conclusions from, this report.

Due to the unique characteristics of private equity assets (PE), including irregular cash flows and lack of reinvestment options, performance measurement is better assessed through different methods than those typically used for more liquid asset classes (which use time weighted metrics) as such methods may not provide representative PE performance. In practice, PE funds are typically long-lived and interim estimates of returns must be based on implicit assessments of expected future cash flows. In order to more effectively gauge performance, PE generally uses two principal cash flow based performance indicators where capital calls, capital reimbursement and profit distributions are the basis for calculation: the internal rate of return "IRR" and the presentation of investment "multiples". IRR is the estimated rate needed to convert (or discount or reduce) the sum of the future uneven cash flow to equal initial investment or down payment. Multiples are calculated as the ratio of cash paid out (distributions) to total funds supplied (drawdowns or capital calls), but do not take into account the timing of the cash flows.

This report is in addition to your account statement for assets custodied at WFB, NA. This report may include assets not custodied at WFB, NA and is in addition to and does not replace statements furnished to you by other service providers and custodians; WFB, NA has not independently verified and is not responsible for the accuracy or completeness of this information. Pricing of assets not held at WFB, NA is for informational purposes only.

Please consult your tax and legal advisors to determine how this information may apply to your own situation. Whether any planned tax result is realized by you depends on the specific facts of your own situation at the time your tax return is filed.

Risk Considerations

All investing involves some degree of risk, whether it is associated with market volatility, purchasing power or a specific security. There is no assurance any investment strategy will be successful. Asset allocation does not guarantee a profit nor does diversification protect against loss.

Alternative Investments

Alternative investments, such as hedge funds, funds of hedge funds, managed futures, private capital, real assets and real estate funds, are not suitable for all investors. They are speculative, highly illiquid, and are designed for long-term investment, and not as trading vehicle. These funds carry specific investor qualifications which can include high income and net-worth requirements as well as relatively high investment minimums. The high expenses associated with alternative investments must be offset by trading profits and other income which may not be realized. Unlike mutual funds, alternative investments are not subject to some of the regulations designed to protect investors and are not required to provide the same level of disclosure as would be received from a mutual fund. They trade in diverse complex strategies that are affected in different ways and at different times by changing market conditions. Strategies may, at times, be out of market favor for considerable periods with adverse consequences for the fund and the investor. An investment in these funds involve the risks inherent in an investment in securities and can include losses associated with speculative investment practices, including hedging and leveraging through derivatives, such as futures, options, swaps, short selling, investments in non-U.S. securities, "junk" bonds and illiquid investments. The use of leverage in a portfolio varies by strategy. Leverage can significantly increase return potential but create greater risk of loss. At times, a fund may be unable to sell certain of its illiquid investments without a substantial drop in price, if at all. Other risks can include those associated with potential lack of diversification, restrictions on transferring interests, no available secondary market, complex tax structures, delays in tax reporting, valuation of securities and pricing. An investment in a fund of funds carries additional risks including asset-based fees and expenses at the fund level and indirect fees, expenses and asset-based compensation of investment funds in which these funds invest. An investor should review the private placement memorandum, subscription agreement and other related offering materials for complete information regarding terms, including all applicable fees, as well as the specific risks associated with a fund before investing.

Commodities

Investing in commodities, futures, and managed futures is not suitable for all investors. Exposure to the commodities markets may subject an investment to greater share price volatility than an investment in traditional equity or debt securities. The prices of various commodities may fluctuate based on numerous factors including changes in supply and demand relationships, weather and acts of nature, agricultural conditions, international trade conditions, fiscal monetary and exchange control programs, domestic and foreign political and economic events and policies, and changes in interest rates or sectors affecting a particular industry or commodity. Products that invest in commodities may employ more complex strategies which may expose investors to additional risks, including futures roll yield risk.

The information in this report is believed to be reliable but is not guaranteed. Third party data contained herein may only be used in conjunction with this report and may not be re-distributed to other parties. Such data is provided without warranty and data providers shall have no liability of any kind. Source for any FTSE Data contained herein is FTSE International Limited ("FTSE") © FTSE 2024. Equities

Equity securities are subject to market risk which means their value may fluctuate in response to general economic and market conditions, the prospects of individual companies, and industry sectors. Investments in equity securities are generally more volatile than other types of securities. There is no guarantee that dividend-paying stocks will return more than the overall stock market. Dividends are not guaranteed and are subject to change or elimination.

Fixed Income

Investments in fixed-income securities are subject to market, interest rate, credit and other risks. Bond prices fluctuate inversely to changes in interest rates. Therefore, a general rise in interest rates can result in the decline in the bond's price. Credit risk is the risk that an issuer will default on payments of interest and/or principal. This risk is heightened in lower rated bonds. If sold prior to maturity, fixed income securities are subject to market risk. All fixed income investments may be worth less than their original cost upon redemption or maturity.

Income from municipal securities is generally free from federal taxes and state taxes for residents of the issuing state. While the interest income is tax-free, capital gains, if any, will be subject to taxes. Income for some investors may be subject to the federal Alternative Minimum Tax (AMT).

High-yield bonds, also known as junk bonds, are subject to greater risk of loss of principal and interest, including default risk, than higher-rated bonds. Investors should not place undue reliance on yield as a factor to be considered in selecting a high yield investment.

Private Equity

Private equity investments are complex, speculative investment vehicles that are not required to provide investors with periodic pricing or valuation and are not subject to the same regulatory requirements as mutual funds. An investment in a private equity fund involves the risks inherent in an investment in securities, as well as specific risks associated with limited liquidity, the use of leverage and illiquid investments.

Private Real Estate

Investment in real estate securities include risks, such as the possible illiquidity of the underlying properties, credit risk, interest rate fluctuations, and the impact of varied economic conditions.

Foreign Securities

Investing in foreign securities presents certain risks not associated with domestic investments, such as currency fluctuation, political and economic instability, and different accounting standards. This may result in greater share price volatility. These risks are heightened in emerging markets.

Sector Disclosures

Consumer Discretionary: Risks associated with investment in the Consumer Discretionary sector include, among others, apparel price deflation due to low-cost entries, high inventory levels and pressure from e-commerce players; reduction in traditional advertising dollars, increasing household debt levels that could limit consumer appetite for discretionary purchases, declining consumer acceptance of new product introductions, and geopolitical uncertainty that could affect consumer sentiment.

Consumer Staples: Consumer Staples industries can be significantly affected by competitive pricing particularly with respect to the growth of low-cost emerging market production, government regulation, the performance of the overall economy, interest rates, and consumer confidence.

The information in this report is believed to be reliable but is not guaranteed. Third party data contained herein may only be used in conjunction with this report and may not be re-distributed to other parties. Such data is provided without warranty and data providers shall have no liability of any kind. Source for any FTSE Data contained herein is FTSE International Limited ("FTSE") © FTSE 2024. For important disclaimers in relation to FTSE Data, please see the relevant attribution and disclaimer requirements at <https://www.iaseg.com/en/ftse-russell/index-resources/attribution>.

Energy: The Energy sector may be adversely affected by changes in worldwide energy prices, exploration, production spending, government regulation, and changes in exchange rates, depletion of natural resources, and risks that arise from extreme weather conditions.

Financial Services: Financial services companies will subject a investment to adverse economic or regulatory occurrences affecting the sector.

Health Care: Some of the risks associated with investment in the Health Care sector include competition on branded products, sales erosion due to cheaper alternatives, research and development risk, government regulations and government approval of products anticipated to enter the market.

Industrials: There is increased risk investing in the Industrials sector. The industries within the sector can be significantly affected by general market and economic conditions, competition, technological innovation, legislation and government regulations, among other things, all of which can significantly affect a portfolio's performance.

Materials: Materials industries can be significantly affected by the volatility of commodity prices, the exchange rate between foreign currency and the dollar, export/import concerns, worldwide competition, procurement and manufacturing and cost containment issues.

Real Estate: Real estate investments have special risks, including the possible illiquidity of the underlying properties, credit risk, interest rate fluctuations, and the impact of varied economic conditions.

Technology: Risks associated with the Technology sector include increased competition from domestic and international companies, unexpected changes in demand, regulatory actions, technical problems with key products, and the departure of key members of management. Technology and Internet-related stocks smaller, less-seasoned companies, tend to be more volatile than the overall market.

Telecommunications: The telecommunications sector is subject to the risks associated with rising interest rates which could increase debt service costs, competition, increased costs to providers due to potential for large equipment upgrades.

Utilities: Utilities are sensitive to changes in interest rates, and the securities within the sector can be volatile and may underperform in a slow economy.

Investment Performance Review For the Quarter Ended September 30, 2024

NOT FDIC INSURED : NO BANK GUARANTEE : MAY LOSE VALUE

For Institutional Investor or Investment Professional Use Only - This material is not for inspection by, distribution to, or quotation to the general public

Financial Markets & Investment Strategy Review

THE ECONOMY

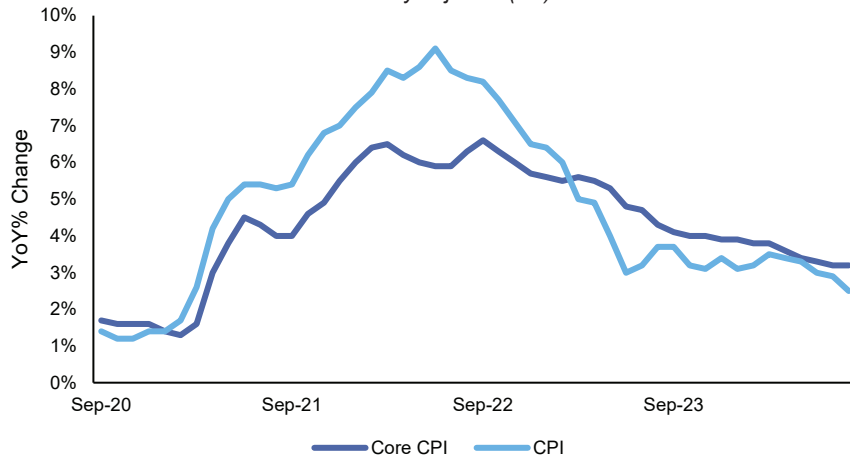

- ▶ In the second quarter, U.S. gross domestic product (GDP) grew at an annualized rate of 3.0%, nearly double the 1.6% recorded in the first quarter of 2024, pointing to a still resilient economy. Within this reading, we saw domestic demand remain strong at 2.8% growth. The U.S. economy once again outperformed many other developed markets including the United Kingdom, which grew 1.8%; Japan, which grew 2.9%; and the Euro Area, which grew a meager 1.1% in the second quarter.
- ▶ The U.S. unemployment rate ended the quarter at 4.1%, in line with the end of second quarter, but still relatively higher than the 3.7% low at the beginning of the year. While the labor market appears to be cooling overall, there are several signs pointing to continued health as jobless claims remain firmly below their long-term averages and layoff rates continue to hold very low.
- ▶ Inflation continued to moderate in the second quarter. Headline inflation (CPI) grew at a year-over-year rate of 2.5% in August, down from the 3.0% growth in June. Core CPI, which excludes volatile food and energy, eased to a three year low of 3.2%. Both mark the lowest readings in more than three years and point to the progress made toward the Federal Reserve's (Fed) inflation target of 2%.

DOMESTIC EQUITY

▶ The S&P 500 Index (S&P) posted a 5.9% return for the third quarter of 2024. As of September 30, 2024, the trailing one-year return for the index was 36.2%.

▶ During the quarter, equity performance broadened beyond mega-cap stocks as the S&P 500 equal-weighted index outperformed its capitalization-weighted counterpart. Across market cap segments, value indices outperformed growth indices for the quarter.

▶ Within S&P 500, only one of 11 GICS sectors posted negative returns over the quarter. The worst performing sectors were Energy (-2.3%), Information Technology (1.6%), and Communication Services (1.7%). The best performing sectors were Utilities (19.4%), Real Estate (17.2%), and Industrials (11.6%).

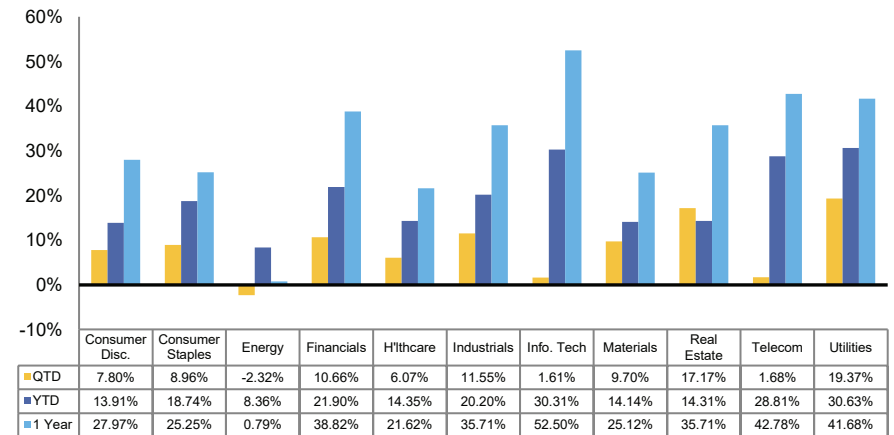

▶ Small-caps, as represented by the Russell 2000 Index, returned 9.3% during the quarter, and outperformed both mid-caps and large-caps. The Russell Midcap and Russell 1000 indices returned 9.2% and 6.1%, respectively.

▶ According to FactSet Earnings Insight (as of September 27, 2024), the expected year-over-year earnings growth rate for the S&P 500 for Q3 2024 was 4.6%, down from the June 30 estimate of 7.8%. At the sector level, Energy (-0.6% to -18.3%) and Materials (7.6% to -1.9%) saw the biggest downward revisions in YoY earnings growth estimates from June 30 to September 27. Conversely, the only sectors revised upward during this period were Information Technology (15.2% to 15.6%) and Communication Services (10.0% to 10.4%).

▶ As of the end of the quarter, the S&P 500 forward P/E (price-to-earnings) ratio was 26.0, above its five-year average of 22.7. By comparison, the Russell 2000 had a forward P/E ratio of 19.9, above its five-year average of 17.8.

*P/E ratios are calculated based on one-year forward estimates and adjusted to include only positive earnings results for consistency.

NON-U.S. EQUITY

- ▶ Markets outside of the United States, as measured by the MSCI ACWI ex-U.S. Index, significantly outperformed their U.S. counterparts, returning 8.06% for the quarter. The weaker dollar was a tailwind to these returns.
- ▶ Nine of the 11 sectors posted positive returns for the quarter, with Real Estate (16.90%) leading the way, followed by Communication Services (13.55%) and Utilities (13.41%). Energy (-1.73%) and Information Technology (-1.58%) were the worst performers for the quarter.
- ▶ Developed ex-U.S. Markets, as represented by the MSCI EAFE Index, underperformed emerging markets (EM), represented by the MSCI Emerging Market Index, returning 7.26% versus 8.72% for the quarter.
- ▶ MSCI Australia (11.32%) outperformed the MSCI EAFE Index on the back of cooling inflation. Of the five largest-weighted countries in the index, MSCI Japan (5.80%) was the worst performer. The surprise July rate hike and subsequent yen’s appreciation reduced the prospects of higher profits for Japanese exporters.
- ▶ Within EM, EM Asia (9.47%) was the largest contributor to overall returns during the quarter, benefitting from MSCI China’s strong return of 23.49%. Chinese equities experienced a sharp rally in September, powered by the injection of additional stimulus. MSCI Korea on the other hand, declined 5.94% during the quarter as the technology sell-off impacted index heavyweights - Samsung and SK Hynix.
- ▶ Value stocks outperformed growth stocks for the quarter, as represented by the broad benchmark. MSCI AC World ex-USA Value returned 9.26%, while MSCI AC World ex-USA Growth returned 6.92%. Within EM, growth outperformed value, returning 9.26% versus 8.12%.
- ▶ Small-caps, as represented by MSCI ACWI ex-U.S. Small Cap Index, outperformed within the international equity markets, returning 8.90% for the quarter.
- ▶ Valuations of non-U.S. equities have moved closer to their long-term average across international equity markets. As of September 30, MSCI EAFE’s forward P/E stood at 15.77 versus a five-year average of 16.06. MSCI EM ended the quarter with a forward P/E ratio of 14.02, slightly higher than its five-year average of 13.32.

*P/E ratios are calculated based on one-year forward estimates and adjusted to include only positive earnings results for consistency.

FIXED INCOME

- ▶ The U.S. bond market, as represented by the Bloomberg U.S. Aggregate (Aggregate) Index, had a strong third quarter, and ended 5.20% higher. The trailing one-year period return is 11.54%.
- ▶ The Bloomberg U.S. Treasury Index closed the quarter with a gain of 4.74%. During the period, the Federal Open Market Committee (FOMC) initiated its first rate cut of the cycle, lowering the Fed funds Rate by 50 bps. This was more than many market participants had anticipated. Treasury rates beyond the one-year range generally fell during the period. The yield curve steepened during the quarter and dis-inverted for the first time in over two years as the Fed funds rate is targeted at 5.0%. Meanwhile, the 10-year fell to 3.78%, and the 2-year ended at 3.64%.
- ▶ Corporate credit had mixed results for the quarter on the falling rates but spots of widening spreads. The investment grade Bloomberg U.S. Corporate (IG Corp) Index gained 5.84% while high yield bonds, as represented by the Bloomberg U.S. Corporate High Yield (HY) Index, gained 1.09%. Spreads tightened in the “CCC” category, but “BB” performed the worst in the high yield category.
- ▶ The fixed-rate mortgage market, as measured by the Bloomberg U.S. Mortgage-Backed Securities (MBS) Index, gained 5.53%. On the commercial side, returns were positive, with the Bloomberg U.S. Agency CMBS Index up 4.74%, while the non-agency CMBS index gained 4.55%.
- ▶ Emerging market USD sovereign bonds, as represented by the JP Morgan EMBI Global Diversified index, gained 6.15% and were supported by sovereign names. Latin America saw the strongest returns for the quarter.

Returns for Fixed-Income Segments

Periods Ended September 30, 2024

Source: Bloomberg.

ALTERNATIVES

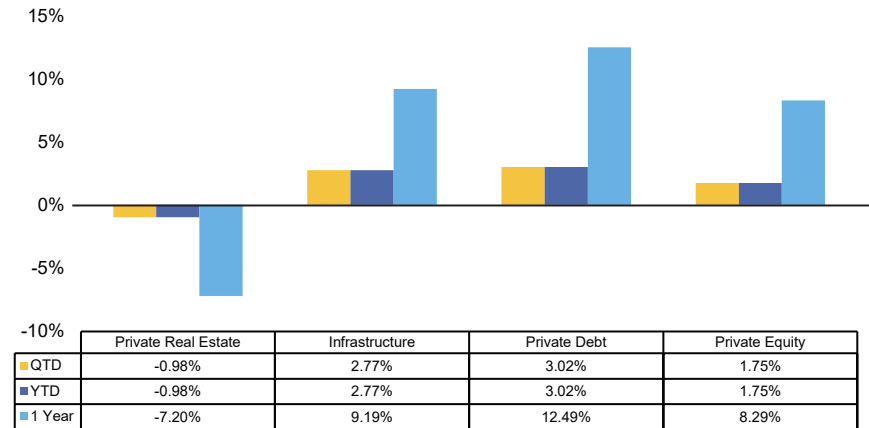

► Public REITs, as measured by the FTSE NAREIT Equity REITs Index, returned 16.09% in the third quarter of 2024, compared to a 0.06% return in the prior quarter. All major sectors saw positive returns. The strong performance can be attributed to expectations of monetary policy easing and falling real interest rates. Private real estate, as measured by the NCREIF Property Index, fell -0.22% in the second quarter of 2024. Weak performance has been driven by property value declines stemming from weak demand and oversupply, primarily within the Office and Apartment sectors. However, value declines are leveling off, and the income component of total returns continues to be positive.

► Listed infrastructure, as measured by the S&P Global Infrastructure Index, gained 13.43% in the third quarter of 2024, compared to a 2.67% increase in the prior quarter. Performance was mostly positive across the major sectors. In the first half of 2024, 25 infrastructure funds raised \$42.24 billion, a modest figure despite the broad slowdown seen in private markets fundraising. The asset class has received increased attention in recent years due to its potential to generate resilient, inflation-sensitive returns. Artificial intelligence and its prospective applications across industries have also contributed to the positive sentiment, especially for data center and utilities. According to PitchBook, infrastructure funds posted a return of 2.77% in Q1 2024. The asset class has generated an annualized return of 10.08% for the five years ended Q1 2024.

► In the first half of 2024, 59 private debt funds raised \$90.77 billion and rebounded from a slow start to the year. The asset class has performed well relative to public fixed income over the long-term. However, competition between private debt managers and a resurgence of the broadly syndicated loan market against the backdrop of a declining rate environment may keep future asset class returns in check. According to the Cliffwater Direct Lending Index, U.S. middle market loans, a proxy for private debt, posted a return of 3.02% in Q1 2024. The asset class has also generated an annualized return of 9.15% for the five years ended Q1 2024.

► In the first half of 2024, 250 private equity funds raised \$295.64 billion, a strong pace despite a challenging macroeconomic environment. Private equity performance has been muted due to high borrowing costs, limited debt availability, and reduced deal flow. Recent trailing performance has lagged public equity indices; however, longer term performance relative to public equities remains strong. According to Cambridge Associates, U.S. private equity posted a return of 1.75% in Q1 2024. The asset class has generated an annualized return of 17.01% for the five years ended Q1 2024.

WHAT WE'RE WATCHING

- ▶ The Fed cut the overnight rate by 50 basis points (bps) (0.50%) to a new target range of 4.75% to 5.00% at its September 18 meeting, marking the first rate cut in more than four years. Looking forward, the Fed's updated "dot plot" points to an additional 50 bps of rate cuts by the end of 2024 and 100 bps of cuts in 2025. Outside of the U.S., other major central banks also made rate changes during the quarter, with the European Central Bank (ECB) cutting rates and the Bank of Japan (BOJ) hiking rates for the second time this year.
- ▶ U.S. manufacturing activity dipped back into contraction during the second quarter, with the ISM U.S. Manufacturing PMI reading at 47.2 in September, signaling weak demand. The services sector crept up into expansion territory, with the Services PMI rising to 51.5 in September.
- ▶ Consumer confidence, as measured by the University of Michigan's Consumer Sentiment survey, rose in September after a dip earlier in the quarter, and ended at 70.1, up from the 68.2 reading at the end of the first quarter.
- ▶ In response to the weakness across the economy, China's central bank unveiled several new monetary and fiscal policies to restore consumer confidence and boost growth. They include lowering bank reserve requirements, cutting its key policy rate, and pledging support to relieve local government debt, among other measures.

Factors to Consider for 6-12 Months

Monetary Policy (Global):

- The Fed has begun its easing cycle with a 50 basis point (bp) cut with expectation of an additional 50 bps in rate cuts by year end.
- The global easing cycle is underway with nearly all major central banks (excluding BoJ) completing multiple rate cuts.

Economic Growth (Global):

- U.S. economic growth remains strong reflecting a consumer who continues to spend at elevated levels.
- Economic growth outside the U.S. remains mixed. China recent stimulus measures are aimed to boost growth, which is conducive to global growth.

Inflation (U.S.):

- Inflation continues its trend lower but has been buoyed by stubborn housing costs. We expect this inflation to further trend lower.
- The broad-based inflation cooling helped fuel the Fed's decision to cut by 50 bps but policy makers note they are not declaring victory on price stability.

Financial Conditions (U.S.):

- The continuation of stable market measures, such as narrow corporate yield spreads, record equity index levels and low volatility, reflect economic confidence.
- We remain focused on the cooling labor market and effects this might have on the consumer as potential catalysts for a broader slow down.

Consumer Spending (U.S.):

- The consumer continues to spend and support economic strength. Upward revisions to the personal savings rate paint the consumer in better light.
- Moderation in the pace of overall spending is expected given slowing wage growth and labor market conditions.

Labor Markets:

- The labor market continues to moderate from extremely strong levels seen in prior quarters. The recent downward revisions to nonfarm payrolls further emphasized the cooling.
- Other labor metrics remain well positioned such as the layoffs and discharge rate pointing towards moderation rather than deterioration.

Corporate Fundamentals:

- Fed rate cuts are a positive for economic growth and corporate earnings, but any tax/tariff changes need to be closely monitored for any impact on profit margins.
- Higher cash levels especially across S&P 500 companies along with broad based earnings growth are positive.

Valuations:

- U.S. equity and credit markets have experienced a run up in valuations. Any negative shock relating to economic growth could lead to sell-off.
- International equities look attractive, but continued economic and geopolitical uncertainty is leading to increased volatility.

Political Risks:

- Geopolitical risks continue to remain elevated. Broadening of middle east conflict, U.S. and China trade and tariff tensions, China's moves in South China Sea and Taiwan Strait further add to risks.
- Policy uncertainty related to US elections outcome is also expected to increase short term volatility.

Statements and opinions expressed about the next 6-12 months were developed based on our independent research with information obtained from Bloomberg and FactSet. The views expressed within this material constitute the perspective and judgment of PFM Asset Management at the time of distribution (9/30/2024) and are subject to change. Information is obtained from sources generally believed to be reliable and available to the public; however, PFM Asset Management cannot guarantee its accuracy, completeness, or suitability.

Asset Class	Our Q4 2024 Investment Outlook	Comments
U.S. Equities		<ul style="list-style-type: none"> Moderate economic growth coupled with Fed easing should result in continued positive performance for US equities. We are concerned about the high valuations, but believe that soft landing economic scenario and earnings growth strength will provide tailwinds. Equity markets experienced a period of volatility during Q3 which we expect to continue amidst slowing growth, geopolitical tensions and election related uncertainty. Small-caps have lagged large caps since the sell off in first week of August pointing to lack of fundamental support to rally in July, but we expect fundamentals to improve as rate cuts take hold. Worries from the Banking Crisis on regional banks seems to be in our rearview mirror.
Large-Caps		
Small-Caps		
Non-U.S. Equities		<ul style="list-style-type: none"> International equities continue to trade at a discount to U.S. and have been recently helped by ECB rate cuts and weakening dollar. BoJ continues to tighten while other central banks are embarking on rate cuts. EM equity performance is reliant on Indian and Chinese equities, which constitute roughly 45% of the MSCI Emerging Market Index. Indian equities are trading at expensive valuations, and we don't expect a sustained recovery in Chinese equities due to stimulus unless there are structural/geopolitical changes addressing debt overhang and geopolitical stability.
Developed Markets		
Emerging Markets		
Fixed Income		<ul style="list-style-type: none"> Slowing inflation and softening labor markets led to Fed cutting by 50 bps at their September meeting. Further rate cuts are expected which is positive for fixed income investors. About \$6.3 trillion is sitting in money market funds which could flow into fixed income as the rates becomes more attractive. Credit markets remain attractive due to strong corporate fundamentals. We remain positive on investment grade but are staying closer to targets on high yield given tighter spreads. We continue to closely watch for signs for any distress in the corporate credit space.
Core Bonds		
Investment Grade Credit		
High Yield Credit		
Diversifying Assets		<ul style="list-style-type: none"> Continued economic growth, falling rates, strengthening fundamentals along with attractive valuations relative to equities are tailwinds to listed real estate performance leading us to overweight the exposure. Transition to renewable energy and increase in AI led data center infrastructure spend are tailwinds for listed infrastructure. Utilities which make up about ~50% of the universe have been performing well recently due to lower rates.
Listed Real Estate		
Listed Global Infrastructure

Important disclosures, definitions of terms and index descriptions

If you have questions regarding this information or wish to receive definitions of any additional terms or indexes used in this report, please contact your Portfolio Manager.

Important disclosures (page 1 of 4)

The information provided here is not intended to replace your account statement. Your account statement is the official record of your account.

Equal Housing Lender. Credit products are offered by U.S. Bank National Association and subject to normal credit approval. Deposit products offered by U.S. Bank National Association. Member FDIC.

For use in one-on-one meetings/presentations.

This information represents the opinion of U.S. Bank. The views are subject to change at any time based on market or other conditions and are current as of the date indicated on the materials. This is not intended to be a forecast of future events or guarantee of future results. The factual information provided has been obtained from sources believed to be reliable but is not guaranteed as to accuracy or completeness.

U.S. Bank and its representatives do not provide tax or legal advice. Your tax and financial situation is unique. You should consult your tax and/or legal advisor for advice and information concerning your particular situation.

Past performance is no guarantee of future results. All performance data, while obtained from sources deemed to be reliable, are not guaranteed for accuracy. Indexes shown are unmanaged and are not available for direct investment, nor are they subject to fees and expenses.

Performance reports included may show performance results gross of fees and expenses. If fees and expenses were included, the performance would be lower. If you have any questions, please speak with your relationship manager for additional information.

Based on our strategic approach to creating diversified portfolios, guidelines are in place concerning the construction of portfolios and how investments should be allocated to specific asset classes based on client goals, objectives and tolerance for risk. Not all recommended asset classes will be suitable for every portfolio. **Diversification and asset allocation do not guarantee returns or protect against losses.**

Important disclosures (page 2 of 4)

Equity securities are subject to stock market fluctuations that occur in response to economic and business developments. **Stocks of small-capitalization companies** involve substantial risk. These stocks historically have experienced greater price volatility than stocks of larger companies and may be expected to do so in the future. **Stocks of mid-capitalization companies** can be expected to be slightly less volatile than those of small-capitalization companies, but still involve substantial risk and may be subject to more abrupt or erratic movements than large-capitalization companies. The value of **large-capitalization stocks** will rise and fall in response to the activities of the company that issued them, general market conditions and/or economic conditions. **Growth investments** focus on stocks of companies whose earnings/profitability are accelerating in the short term or have grown consistently over the long term. Such investments may provide minimal dividends, which could otherwise cushion stock prices in a market decline. Stock value may rise and fall significantly based, in part, on investors' perceptions of the company, rather than on fundamental analysis of the stocks. Investors should carefully consider the additional risks involved in growth investments. **Value investments** focus on stocks of income-producing companies whose price is low relative to one or more valuation factors, such as earnings or book value. Such investments are subject to risks that their intrinsic values may never be realized by the market, or such stocks may turn out not to have been undervalued. Investors should carefully consider the additional risks involved in value investments.

International investing involves special risks, including foreign taxation, currency risks, risks associated with possible differences in financial standards and other risks associated with future political and economic developments. Investing in **emerging markets** may involve greater risks than investing in more developed countries. In addition, concentration of investments in a single region may result in greater volatility.

Investments in **real estate securities** can be subject to fluctuations in the value of the underlying properties, the effect of economic conditions on real estate values, changes in interest rates and risks related to renting properties (such as rental defaults). There are special risks associated with an investment in **commodities**, including market price fluctuations, regulatory changes, interest rate changes, credit risk, economic changes and the impact of adverse political or financial factors.

Investments in **fixed income securities** are subject to various risks, including changes in interest rates, credit quality, market valuations, liquidity, prepayments, early redemption, corporate events, tax ramifications and other factors. Investment in fixed income securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term securities. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. Investments in **high yield bonds** offer the potential for high current income and attractive total return, but involve certain risks. Changes in economic conditions or other circumstances may adversely affect a bond issuer's ability to make principal and interest payments.

Important disclosures (page 3 of 4)

The **municipal bond** market is volatile and can be significantly affected by adverse tax, legislative or political changes and the financial condition of the issues of municipal securities. Interest rate increases can cause the price of a bond to decrease. Income on municipal bonds is free from federal taxes, but may be subject to the federal alternative minimum tax (AMT), state and local taxes. **Treasury Inflation-Protected Securities (TIPS)** offer a lower return compared to other similar investments and the principal value may increase or decrease with the rate of inflation. Gains in principal are taxable in that year, even though not paid out until maturity.

Non-financial **specialty assets**, such as real estate, farm, ranch and timber properties, oil, gas and mineral interests or closely-held business interests are complex and involve unique risks specific to each asset type, including the total loss of value. Special risk considerations may include natural events or disasters, complex tax considerations and lack of liquidity. Specialty assets may not be suitable for all investors.

Alternative investments very often use speculative investment and trading strategies. There is no guarantee that the investment program will be successful. Alternative investments are designed only for investors who are able to tolerate the full loss of an investment. These products are not suitable for every investor even if the investor does meet the financial requirements. It is important to consult with your investment professional to determine how these investments might fit your asset allocation, risk profile and tax situation. **Hedge funds** are speculative and involve a high degree of risk. An investment in a hedge fund involves a substantially more complicated set of risk factors than traditional investments in stocks or bonds, including the risks of using derivatives, leverage and short sales, which can magnify potential losses or gains. Restrictions exist on the ability to redeem or transfer interests in a fund. **Exchange-traded funds (ETFs)** are baskets of securities that are traded on an exchange like individual stocks at negotiated prices and are not individually redeemable. ETFs are designed to generally track a market index and shares may trade at a premium or a discount to the net asset value of the underlying securities. **Private equity** investments provide investors and funds the potential to invest directly into private companies or participate in buyouts of public companies that result in a delisting of the public equity. Investors considering an investment in private equity must be fully aware that these investments are illiquid by nature, typically represent a long-term binding commitment and are not readily marketable. The valuation procedures for these holdings are often subjective in nature. **Private debt** investments may be either direct or indirect and are subject to significant risks, including the possibility of default, limited liquidity and the infrequent availability of independent credit ratings for private companies. **Structured products** are subject to market risk and/or principal loss if sold prior to maturity or if the issuer defaults on the security. Investors should request and review copies of Structured Products Pricing Supplements and Prospectuses prior to approving or directing an investment in these securities.

Important disclosures (page 4 of 4)

Mutual fund investing involves risk and principal loss is possible. Investing in certain funds involves special risks, such as those related to investments in small- and mid-capitalization stocks, foreign, debt and high-yield securities and funds that focus their investments in a particular industry. Please refer to the fund prospectus for additional details pertaining to these risks. An investment in **money market funds** is not insured or guaranteed by the Federal Deposit Insurance Corporation (FDIC) or any other government agency. Although these funds seek to preserve the value of an investment at \$1.00 per share, it is possible to lose money by investing in these funds.

Holdings of First American Funds: U.S. Bancorp Asset Management, Inc. is a registered investment advisor and subsidiary of U.S. Bank National Association. U.S. Bank National Association is a separate entity and wholly owned subsidiary of U.S. Bancorp. U.S. Bank is not responsible for and does not guarantee the products, performance or services of U.S. Bancorp Asset Management. U.S. Bancorp Asset Management, Inc. serves as an investment advisor to First American Funds. **Holdings of Nuveen mutual funds:** Firststar Capital Corporation (Firststar Capital), an affiliate of U.S. Bancorp, holds a less-than-10 percent ownership interest in Windy City Investments Holdings, LLC which was formerly the parent of Windy City Investment Inc. and the indirect parent of Nuveen Fund Advisors, LLC which is the investment advisor to the Nuveen Mutual Funds. On October 1, 2014, Windy City Investments, Inc. was sold to Teachers Insurance and Annuity Association of America. As a result of the sale, U.S. Bancorp no longer has an indirect ownership interest in Nuveen Fund Advisors, LLC. Depending on the outcome of certain factors, Firststar Capital might in the future receive an earn-out payment in respect of its interest in Windy City Investment Holdings, LLC, under the terms of the sale. **Non-proprietary mutual funds:** U.S. Bank may enter into agreements with other non-proprietary mutual funds or their service providers whereby U.S. Bank provides shareholder services and/or sub-transfer agency, custodial and other administrative support services and receives compensation for these services. Compensation received by U.S. Bank directly or indirectly from mutual funds does not increase fund fees and expenses beyond what is disclosed in the fund prospectuses. For more information, review the fund prospectus.

Definitions of report and statement terms (page 1 of 5)

Accredited Investor: Private placement securities generally require that investors be accredited due to the additional risks and speculative nature of the securities. For natural persons, the criteria is met by a net worth of more than \$1 million (excluding primary residence) or an income of more than \$200,000 individually (\$300,000 jointly) for the two most recent years and a reasonable expectation for the same in the current year. For other entities, such as corporations, partnerships, trusts and employee benefit plans, the criteria is met with at least \$5 million in assets. See full definition in Rule 501 of Regulation D under the Securities Act of 1933.

Alpha: A measure of risk-adjusted performance. A statistic measuring that portion of a stock, fund or composite's total return attributable to specific or non-market risk. Alpha measures non-market return and indicates how much value has been added or lost. A positive Alpha indicates the fund or composite has performed better than its Beta would predict (i.e., the manager has added value above the benchmark). A negative Alpha indicates a fund or composite has underperformed given the composite's Beta.

Alternative Investments: As used by U.S. Bank, an investment considered to be outside of the traditional asset classes of long-only stocks, bonds and cash. Examples of alternative investments include hedge funds, private equity, options and financial derivatives.

Annualized Excess Return: Shows the difference between the annualized linked returns of a portfolio and the model benchmark. Performance reports provided annualize only periods greater than one year.

Annualized or Annual Rate of Return: Represents the average annual change in the value of an investment over the periods indicated.

Batting Average: Shows how consistently the portfolio return met or beat the market.

Beta: A measure of your portfolio's risk relative to a benchmark. A portfolio with a beta of 1.5, for example, would be expected to return roughly 1.5 times the benchmark's return. A high Beta indicates a riskier portfolio.

Bond Credit Rating: A grade given to bonds by a private independent rating service that indicates their credit quality. Ratings are the opinion of Standard & Poor's or other agencies as noted and not the opinion of U.S. Bank.

Consumer Price Index (CPI): A measure of the average change in prices over time in a market basket of goods and services and is one of the most frequently used statistics for identifying periods of inflation and deflation.

Convexity to Stated Maturity: A measure of the curvature in the relationship between bond prices and bond yields that demonstrates how the duration of a bond changes as the interest rate changes. Convexity is used as a risk-management tool and helps to measure and manage the amount of market risk to which a portfolio of bonds is exposed. This version of convexity measures the rate change in duration of a bond as the yield to (stated) maturity changes.

Definitions of report and statement terms (page 2 of 5)

Cost basis/book value: The original value of an asset at the time it was acquired. This is normally the purchase price or appraised value at the time of acquisition. This data is for information purposes only.

Cumulative Excess Return: Shows the difference between the annualized linked returns of a portfolio and the model benchmark. Performance reports provided use unannualized returns in periods up to one year, but annualized returns for periods exceeding one year.

Downside Capture: The downside capture ratio reflects how a portfolio compares to a benchmark during periods when the benchmark is down. A downside capture ratio of 0.80 (or 80 percent) means the portfolio has historically declined only 80 percent as much as the benchmark during down markets.

Downside Deviation: The deviation of returns that fall below a minimum acceptable return (MAR). Although the numerator includes only returns below the MAR, the denominator includes all returns in the performance period. This risk statistic is similar to the downside standard deviation except the sum is restricted to returns less than the MAR instead of the mean.

Downside Standard Deviation: The deviation of returns that fall below the mean return. Although the numerator includes only returns below the mean, the denominator includes all returns in the performance period. This risk statistic is similar to the downside deviation except the sum is restricted to returns less than the mean instead of the minimum acceptable return (MAR).

Effective Maturity: The date of a bond's most likely redemption, given current market conditions, taking into consideration the optional and mandatory calls, the optional, mandatory and recurring puts, and the stated maturity.

Estimated annual income: The amount of income a particular asset is anticipated to earn over the period indicated. The shares multiplied by the annual income rate.

Gain/loss calculation: If an asset was sold, the difference between the proceeds received from the sale compared to the cost of acquiring the asset. If the value of the proceeds is the higher of the two numbers, then a gain was realized. If the value of the proceeds is the lower of the two numbers, a loss was incurred. This data is for information purposes only.

Gross of Fees: Represents all assets included in the calculation of the portfolio -- before the deduction of trust and asset management fees -- and is inclusive of all applicable third party security fees and expenses. Details of those fees and expenses are provided in the security's prospectus or offering documents.

Information Ratio: The information ratio compares the average excess return of the portfolio over its associated benchmark divided by the tracking error.

M-Squared: The hypothetical return of the portfolio after its risk has been adjusted to match a benchmark.

Definitions of report and statement terms (page 3 of 5)

Market Value: Publicly traded assets are valued using market quotations or valuation methods from financial industry services believed by us to be reliable. Assets, that are not publicly traded, may be reflected at values from other external sources or special valuations prepared by us. Assets for which a current value is not available may be reflected as not valued, at par value, or at a nominal value. Values shown do not necessarily reflect prices at which assets could have been bought or sold. Values are updated based on internal policy and may be updated less frequently than statement generation.

Market Value Over Time: Many factors can impact the portfolio value over time, such as contributions to the account, distributions from the account, the investment of dividends and interest, the deduction of fees and expenses, and market performance.

Modified Duration to Effective Maturity: A formula that expresses the measurable change in the value of a security in response to a change in interest rates. This version of Modified Duration takes into consideration a “horizon date/price” that is, given current conditions, the most likely redemption date/price using the set of calls/puts, as well as stated maturity.

Modified Duration to Stated Maturity: A formula that expresses the measurable change in the value of a security in response to a change in interest rates. This version of Modified Duration uses stated maturity as the “horizon date/price” and ignores any potential call/put/pre-refunding, even if they are mandatory.

Net of Fees: Represents all assets included in the calculation of the portfolio -- after the deduction of trust and asset management fees. Please refer to the client fee schedule for additional information.

Price/Earnings Ratio (P/E): The P/E ratio of a company is calculated by dividing the price of the company’s stock by its trailing 12-month earnings per share. A high P/E usually indicates that the market is paying a premium for current earnings because it believes in the firm’s ability to grow its earnings. A low P/E indicates the market has less confidence that the company’s earnings will increase. Within a portfolio, P/E is the weighted average of the price/earnings ratios of the stocks in the portfolio.

Qualified Purchaser: Some private placement securities require that investors be Qualified Purchasers in addition to being Accredited Investors. For natural persons, the criteria is generally met when the client (individually or jointly) owns at least \$5 million in investments. For other entities, such as corporations, partnerships, trusts and employee benefit plans, the criteria is met with at least \$25 million in investments though there are other eligibility tests that may apply. See full definition in Section 2(a)(51) of the Investment Company Act of 1940.

R-Squared: Measures the portion of the risk in your portfolio that can be attributed to the risk in the benchmark.

Realized and Unrealized Gains/Losses: Are calculated for individual tax lots based on the records we have available. Some data may be incomplete or differ from what you are required to report on your tax return. Some data used in these calculations may have been obtained from outside sources and cannot be verified by U.S. Bank. The data is intended for informational purposes only and should not be used for tax reporting purposes. Please consult with your tax or legal advisor for questions concerning your personal tax or financial situation.

Definitions of report and statement terms (page 4 of 5)

Residual Risk: The amount of risk specific to the assets in a portfolio distinct from the market, represented by a benchmark.

Return: An indication of the past performance of your portfolio.

Sharpe Ratio: Measures of risk-adjusted return that calculates the return per unit of risk, where risk is the Standard Deviation of your portfolio. A high Sharpe ratio indicates that the portfolio is benefiting from taking risk.

Sortino Ratio: Intended to differentiate between good and bad volatility. Similar to the Sharpe ratio, except it uses downside deviation for the denominator instead of standard deviation, the use of which doesn't discriminate between up and down volatility.

Spread: The difference between the yields of two bonds with differing credit ratings (most often, a corporate bond with a certain amount of risk is compared to a standard traditionally lower risk Treasury bond). The bond spread will show the additional yield that could be earned from a bond which has a higher risk.

Standard Deviation: A measure of the volatility and risk of your portfolio. A low standard deviation indicates a portfolio with less volatile returns and therefore less inherent risk.

Time-weighted Return: The method used to calculate performance. Time-weighted return calculates period by period returns that negates the effect of external cash flows. Returns for periods of greater than one year are reported as an annualized (annual) rate of return. Returns of less than one year are reported on a cumulative return basis. Cumulative return is the aggregate amount an investment has gained or lost over time, independent of the period involved.

Tracking Error: A divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark. This is often in the context of a hedge or mutual fund that did not work as effectively as intended, creating an unexpected profit or loss instead.

Traditional Investments: As used by U.S. Bank, an investment made in equity, fixed income or cash securities, mutual funds or exchange-traded funds (ETFs) where the investor buys at a price with the goal that the investment will go up in value.

Top 10 Holdings: The 10 assets with the highest market values in the account.

Total Portfolio Gross of Fees: Represents all assets included in the calculation of the portfolio, before the deduction of trust and asset management fees, and is inclusive of all applicable third-party security fees and expenses. Details of those fees and expenses are provided in the security's prospectus or offering documents.

Definitions of report and statement terms (page 5 of 5)

Total Return: The rate of return that includes the realized and unrealized gains and losses plus income for the measurement period.

Treynor Ratio: Measures the performance of a sector relative to risk by dividing the return of the sector in excess of the risk-free return by the sector's Beta. The higher the Treynor ratio, the better the return relative to risk.

Turnover Percent: Indicates how frequently asset are bought and sold within a portfolio.

Turnover Ratio: The percentage of a mutual fund's or other investment vehicle's holdings that have been "turned over" or replaced with other holdings in a given year.

Unrealized gain (loss) — The difference between the current market value (at the end of the statement period) and the cost to acquire the asset. If the current market value is higher than the cost, a gain is reflected. If the current market value is lower than the cost paid, a loss is reflected. This data is for information purposes only.

Upside Capture: The upside capture ratio reflects how a portfolio compares to the selected model benchmark during periods when the benchmark is up. An upside capture ratio of 1.15 (or 115 percent) means the portfolio has historically beat the benchmark by 15 percent during up markets.

Yield: The annual rate of return on an investment, expressed as a percentage. For bonds, it is the coupon rate divided by the market price. For stocks, it is the annual dividend divided by the market price.

Frequently used indexes (page 1 of 5)

Bloomberg Barclays 1-3 year U.S. Treasury Index: Measures the performance of the U.S. government bond market and includes public obligations of the U.S. Treasury with a maturity between one year and up to (but not including) three years.

Bloomberg Barclays 1-5 year U.S. Treasury Index: Includes all publicly issued, U.S. Treasury securities that have a remaining maturity of greater than or equal to one year and less than five years, are rated investment grade and have \$250 million or more of outstanding face value.

The Bloomberg Barclays 1-5 year Municipal Index: Measures the performance of municipal bonds with time to maturity of more than one year and less than five years.

Bloomberg Barclays 7-year Municipal Index: Includes municipal bonds with a minimum credit rating of Baa that have been issued as part of a transaction of at least \$50 million, have a maturity value of at least \$5 million and a maturity range of four to six years.

Bloomberg Barclays Global Aggregate Index ex-U.S. Index: Measure of global investment grade debt from 24 local currency markets. This multi-currency benchmark includes Treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers.

Bloomberg Barclays Global Treasury ex-U.S. Index: Includes government bonds issued by investment-grade countries outside the United States, in local currencies, that have a remaining maturity of one year or more and are rated investment grade.

Bloomberg Barclays High Yield Municipal Bond Index: An unmanaged index made up of bonds that are non-investment grade, unrated or below Ba1 bonds.

Bloomberg Barclays Intermediate Aggregate Index: Consists of one- to 10-year governments, one- to 10-year corporate bonds, all mortgages and all asset-backed securities within the Aggregate Index.

Bloomberg Barclays Mortgage-Backed Securities Index: Covers agency mortgage-backed pass-through securities (both fixed-rate and hybrid adjustable-rate mortgages) issued by Ginnie Mae (GNMA), Fannie Mae (FNMA), and Freddie Mac (FHLMC).

Bloomberg Barclays U.S. Aggregate Bond Index: Measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market, including Treasuries, government-related and corporate securities, mortgage-backed securities, asset-backed securities and commercial mortgage-backed securities.

Bloomberg Barclays U.S. Corporate Bond Index: Measures the investment grade, fixed-rate, taxable corporate bond market and includes U.S. dollar-denominated securities publicly issued by U.S. and non-U.S. industrial, utility and financial issuers.

Frequently used indexes (page 2 of 5)

Bloomberg Barclays U.S. Corporate High Yield Bond Index: Measures the U.S. dollar denominated, high yield, fixed-rate corporate bond market.

Bloomberg Barclays U.S. Municipal Bond Index: Measures the investment grade, U.S. dollar-denominated, fixed tax-exempt bond market. The index includes state and local general obligation, revenue, insured and pre-refunded bonds.

Bloomberg Barclays U.S. Treasury Index: Measures U.S. dollar-denominated, fixed-rate, nominal debt issued by the U.S. Treasury.

Bloomberg Barclays U.S. Treasury Inflation-Protected Securities (TIPS) Index: An unmanaged index includes all publicly issued, U.S. TIPS that have at least one year remaining to maturity, are rated investment grade, and have \$250 million or more of outstanding face value.

Cambridge U.S. Private Equity Index: This index is based on returns data compiled for U.S. private equity funds (including buyout, growth equity and mezzanine funds) that represent the majority of institutional capital raised by private equity partnerships formed since 1986. Returns may be delayed by up to six months. Quarterly performance is prorated based on the cube root for the months of the quarter.

Citigroup 3-Month Treasury Bills: An unmanaged index and represents monthly return equivalents of yield averages of the last three-month Treasury Bill issues.

Citigroup 6-Month Treasury Bills: An unmanaged index and represents monthly return equivalents of yield averages of the last six-month Treasury Bill issues.

Credit Suisse Leverage Loan Index: Represents tradable, senior-secured, U.S. dollar-denominated non-investment grade loans.

Dow Jones Industrial Average (DJIA): The price-weighted average of 30 significant U.S. stocks traded on the New York Stock Exchange and NASDAQ. The DJIA is the oldest and single most watched index in the world.

Dow Jones Select REIT Index: Measures the performance of publicly traded REITs and REIT-like securities in the U.S. and is a proxy for direct real estate investment, in part by excluding companies whose performance may be driven by factors other than the value of real estate.

HFRI Indices: The Hedge Fund Research, Inc. (HFRI) indexes are a series of benchmarks designed to reflect hedge fund industry performance by constructing composites of constituent funds, as reported by the hedge fund managers listed within the HFR Database.

Frequently used indexes (page 3 of 5)

HFRI Equity Hedge Total Index: Uses the HFR (Hedge Fund Research) database and consists only of equity hedge funds with a minimum of \$50 million assets under management or a 12-month track record and that reported assets in U.S. dollars.

HFRI Relative Value Fixed Income Corporate Index: Uses the HFR (Hedge Fund Research) database and consists of only relative value fixed income corporate funds with a minimum of \$50 million assets under management or a 12-month track record and that reported assets in U.S. dollars.

ICE BofAML 1-3 Year Corporate Index: Tracks U.S. dollar-denominated investment grade public debt issued in the U.S. bond market with maturities of one to three years.

ICE BofAML 1-5 Year Corporate and Government Index: Tracks the performance of short-term U.S. investment grade government and corporate securities with maturities between one and five years.

ICE BofAML U.S. 7-10 Year Index: Tracks the performance of U.S. dollar denominated investment grade rated corporate debt publicly issued in the U.S. domestic market and includes all securities with a remaining term to maturity of greater than or equal to seven years and less than 10 years.

ICE BofAML Global Broad Market Index: Tracks the performance of investment grade public debt issued in the major domestic and Eurobond markets, including global bonds.

ICE BofAML U.S. High Yield Master II Index: Commonly used benchmark index for high yield corporate bonds and measures the broad high yield market.

J.P. Morgan Emerging Markets Bond Index Global (EMBI Global): Tracks total returns for traded external debt instruments in the emerging markets.

London Interbank Offered Rate (LIBOR) 3-months: The interest rate offered by a specific group of London banks for U.S. dollar deposits with a three-month maturity.

London Interbank Offered Rate (LIBOR) 9-months: The interest rate offered by a specific group of London banks for U.S. dollar deposits with a nine-month maturity.

MSCI All Country World Index (ACWI): Designed to measure the equity market performance of developed and emerging markets.

Frequently used indexes (page 4 of 5)

Russell 2000 Value Index: Measures companies in the Russell 2000 Index having lower price-to-book ratios and lower forecasted growth values. The Russell 2000 Index includes the 2,000 firms from the Russell 3000 Index with the smallest market capitalizations.

Russell 3000 Index: Measures the performance of the 3,000 largest U.S. securities based on total market capitalization.

Russell Midcap Index: Measures the 800 smallest companies in the Russell 3000 Index.

Russell Midcap Growth Index: Measures companies in the Russell Midcap Index having higher price-to-book ratios and higher forecasted growth values.

Russell Midcap Value Index: Measures companies in the Russell Midcap Index having lower price-to-book ratios and lower forecasted growth values.

MSCI All County World ex-U.S. Index (ACWI, excluding United States): Tracks the performance of stocks representing developed and emerging markets around the world that collectively comprise most foreign stock markets. U.S. stocks are excluded from the index.

MSCI EAFE Index: Includes approximately 1,000 companies representing the stock markets of 21 countries in Europe, Australasia and the Far East.

MSCI Emerging Markets (EM) Index: Designed to measure equity market performance in global emerging markets.

MSCI World Index: Tracks equity market performance of developed markets through individual country indices.

NAREIT Index: Includes REITs (Real Estate Investment Trusts) listed on the New York Stock Exchange, NASDAQ and American Stock Exchange.

NASDAQ Composite Index: A market capitalization-weighted average of roughly 5,000 stocks that are electronically traded in the NASDAQ market.

NCREIF Property Index (NPI): Measures the investment performance of a very large pool of individual commercial real estate properties acquired in the private market for investment purposes only.

Russell 1000 Index: Measures the performance of the 1,000 largest companies in the Russell 3000 Index and is representative of the U.S. large capitalization securities market.

Frequently used indexes (page 5 of 5)

Russell 1000 Growth Index: Measures companies in the Russell 1000 Index with higher price-to-book ratios and higher forecasted growth values. It includes the largest 1,000 firms in the Russell 3000 Index.

Russell 1000 Value Index: Measures companies in the Russell 1000 Index with lower price-to-book ratios and lower forecasted growth values. It includes the largest 1,000 firms in the Russell 3000 Index.

Russell 2000 Index: Measures the performance of the 2,000 smallest companies in the Russell 3000 Index and is representative of the U.S. small capitalization securities market.

Russell 2000 Growth Index: Measures companies in the Russell 2000 Index having higher price-to-book ratios and higher forecasted growth values, and is representative of U.S. securities exhibiting growth characteristics. The Russell 2000 Index includes the 2,000 firms from the Russell 3000 Index with the smallest market capitalizations.

S&P 500 Index: Consists of 500 widely traded stocks that are considered to represent the performance of the U.S. stock market.

S&P Global ex-U.S. Property Index: Measures the investable universe of publicly traded property companies domiciled in developed and emerging markets excluding the United States. The companies included are engaged in real estate related activities such as property ownership, management, development, rental and investment.

S&P GSCI: A composite index of commodity sector returns, representing an unleveraged, long-only investment in commodity futures that is broadly diversified across the spectrum of commodities.

S&P/Case-Shiller Home Price Indexes: A group of indexes that track changes in home prices throughout the United States. Case-Shiller produces indexes representing certain metropolitan statistical areas (MSA) as well as a national index.

Swiss Re Global Cat Bond Total Return Index: Tracks the aggregate performance of all U.S. dollar-denominated euros and Japanese yen-denominated catastrophe bonds, capturing all ratings, perils and triggers.

U.S. Dollar Index: Indicates the general international value of the U.S. dollar by averaging the exchange rates between the U.S. dollar and six major world currencies.

Wilshire 5000 Index: Composed of more than 6,700 publicly-traded U.S. companies and is designed to track the overall performance of the American stock markets.

Market Environment

3rd quarter summary

THE ECONOMY

- On September 18th, the Federal Reserve cut interest rates by 50 basis points, bringing the target rate from 5.25-5.50% to 4.75-5.00%. This larger cut surprised many investors who still see inflation risks on the horizon and the economy as generally strong. This move likely kicks off a multi-year period of cuts as the Fed brings interest rates towards what they see as a more neutral level.
- U.S. inflation (CPI) fell to 2.4% year-over-year in September, moving closer to the Fed's 2% target. However, risks remain that inflation moderates above the Fed target, as shelter inflation is still elevated and food prices accelerated in September. Core inflation (ex-Food & Energy) has not budged from Q2 levels—at 3.3% year-over-year.

EQUITY

- Global markets delivered strong performance, with consistent results across regions. Emerging markets (MSCI EM +8.7%) led, followed by international developed (MSCI EAFE +7.3%) and lastly the U.S. market (S&P 500 +5.9%). U.S. dollar weakness provided particular benefits to investors in international developed equities.
- Small cap and value style investing reversed their run of underperformance during the second quarter. Small cap led large cap by +3.2% (-8.9% over the past year), while value also outperformed by +6.2% (-14.4% over the past year). Despite this improvement, the market environment has been incredibly difficult for these style factors.

FIXED INCOME

- The 10-year U.S. Treasury yield fell from 4.36% to 3.79% during the quarter, alongside a series of economic data releases that suggested inflation is moving further towards the Fed's 2% target, and that the labor market is softening. Interestingly, yields moved slightly higher in late September after the Fed's aggressive 50 bps rate cut.
- Default activity remained low, given economic strength. High yield bond default rates continued to decline, falling to 1.4%, well below the long-term annual average of 3.4%. However, distressed exchange activity was high. Total distressed exchange volume was roughly \$13.5 billion, the second largest quarter on record (since Q4 2008).

ASSET ALLOCATION ISSUES

- China announced an aggressive stimulus program in the form of both fiscal and monetary support. Those moves followed a People's Bank of China rate cut from 2.3% to 2.0%. Chinese equities rallied more than 30% in late September. It is not yet clear whether these efforts will help solve any of China's deep and structural issues.
- On August 5th, volatility spiked 42 points to 66, marking the largest one day jump in volatility in modern market history. This was widely attributed to the unwinding of carry trade positions (one popular carry trade involved borrowing in Yen to invest in equities) following a weak labor market data release and an unexpected interest rate hike from the Bank of Japan.

In September, the Fed enacted the first of likely a series of interest rate cuts.

A soft landing appears very possible for the U.S. economy.

U.S. economics summary

- On September 18th, the Federal Reserve cut interest rates by 50 basis points, bringing the target rate from 5.25-5.50% to 4.75-5.00%. This larger cut surprised many investors who still see inflation risks on the horizon and see the economy as generally strong. This move likely kicks off a multi-year period of cuts as the Fed brings interest rates towards what they see as a more neutral level.
- U.S. inflation (CPI) fell to 2.4% year-over-year in September, moving closer to the Fed's 2% target. However, risks remain that inflation remains above the Fed target, as shelter inflation is still high and food prices accelerated in September. Core inflation (ex-Food & Energy) has not budged from Q2 levels—at 3.3% year-over-year.
- Since earlier in 2024, unemployment had been ticking higher, but in August and September this trend reversed, with unemployment ending the quarter at 4.1%. The September nonfarm employment report reflected a 254,000

gain in jobs, dramatically outperforming expectations. The impacts of unlawful immigration on official employment statistics have continued to cause discrepancies in data and confusion regarding true labor conditions. We believe analyzing jobs data requires careful analysis.

- Multiple labor strikes have been occurring around the country, including Boeing and the International Longshoremen's Association (ILA). As organized labor fights for higher wages and benefits, disruptions to production and trade could contribute to inflation flareups.
- Consumer sentiment improved slightly during the third quarter, as illustrated by the University of Michigan Consumer Sentiment survey. Households expressed further frustration about high prices, but optimism has grown around the economy and the inflation outlook. According to the survey, expectations have brightened for Americans across the economic and political spectrum.

	Most Recent	12 Months Prior
Real GDP (YoY)	2.7% 9/30/24	2.4% 6/30/23

U-6 Unemployment	7.7% 9/30/24	7.0% 9/30/23

International economics summary

- The Eurozone faces slowing growth, with recession potentially imminent for Germany. A global shift in consumer purchase patterns towards *services* and away from *goods* has likely had a major impact on manufacturing-heavy economies. These effects are biting especially hard in export-heavy economies such as Germany and Japan. China's struggling economy is having widespread impacts on global growth, as well as energy and other commodity prices.
- Falling inflation and moderating economic growth creates conditions central banks may see as conducive to interest rate cuts. The European Central Bank and Federal Reserve kicked off a rate cutting cycle during the quarter. The Bank of Japan stands out from the crowd, deciding earlier this year to raise rates modestly. The bank sees Japan's economy growing faster than potential and wishes to normalize rates carefully.
- One year has passed since the Hamas attack on Israel, and the beginning of

the Israel-Hamas war. The conflict has now broadened out as Israel engages with the Iranian-backed militia Hezbollah, which is designated a terrorist group by much of the western world. Over the past month, Israel and Iran have clashed directly, substantially increasing risks of widespread war in the Middle East.

- China announced an aggressive economic stimulus program in the form of fiscal and monetary support. Those moves followed a People's Bank of China rate cut from 2.3% to 2.0%. Chinese equities rallied more than 30% in the last few weeks of September. It is not yet clear whether these developments will be sufficient to help turnaround the Chinese economy, which faces serious structural issues.
- India continues to be the fastest-growing major economy in the world, posting strong real GDP growth (+6.7%) on the back of a rapidly growing manufacturing sector and large investments in public infrastructure.

Area	GDP (Real, YoY)	Inflation (CPI, YoY)	Unemployment
United States	2.7% 9/30/24	2.4% 9/30/24	4.1% 9/30/24
Eurozone	0.6% 6/30/24	1.7% 9/30/24	6.4% 8/31/24
Japan	(1.0%) 6/30/24	2.2% 9/30/24	2.5% 8/31/24
BRICS Nations	4.8% 6/30/24	2.0% 9/30/24	5.3% 12/31/23
Brazil	3.3% 6/30/24	4.4% 9/30/24	6.6% 8/31/24
Russia	4.1% 6/30/24	8.6% 9/30/24	2.4% 8/31/24
India	6.7% 6/30/24	5.5% 9/30/24	7.8% 9/30/24
China	4.6% 9/30/24	0.4% 9/30/24	5.1% 9/30/24

NOTE: India lacks reliable government unemployment data. Unemployment rate shown above is estimated from the Centre for Monitoring Indian Economy. The Chinese unemployment rate represents the monthly surveyed urban unemployment rate in China.

Equity environment

- Global markets delivered strong performance during the quarter, with fairly consistent results across broad regions. Emerging markets (MSCI EM +8.7%) led, followed by international developed equities (MSCI EAFE +7.3%), and lastly the domestic market (S&P 500 +5.9%). Dollar weakness provided particular benefits to investors in international developed equities.
- Market expectations for Federal Reserve rate cuts became aggressive, after the Fed cut by 50 basis points on September 18th. This likely contributed to dollar weakness, since expectations for lower rates make U.S. dollar holdings less attractive.
- S&P 500 blended year-over-year earnings growth was +3.4%, as of October 18th. Once again, technology companies led the way on earnings, providing growth of +15.2%, while Healthcare ranked second at +10.9%. Materials (-2.7%) and Energy (-20.9%) both

acted as a drag on overall index earnings.

- Small cap and value reversed their run of underperformance. Small cap led large cap by +3.2% (Russell 2000 +9.3% vs. Russell 1000 +6.1%) in Q3, while value outperformed growth by +6.2% (Russell 1000 Value +9.4% vs. Russell 1000 Growth +3.2%). Despite size and style factors performing well during Q3, both have done poorly over the past full year, with small cap and value underperforming by -8.9% and -14.4%, respectively.
- On August 5th, volatility spiked 42 points to 66, marking the largest one day jump in volatility in modern market history. This was widely attributed to significant investor unwinding of carry trade positions (borrowing in Yen to purchase U.S. equities) following a weak labor market data release and an unexpected interest rate hike from the Bank of Japan.

Fixed income environment

- On September 18th, the Federal Reserve cut interest rates by 50 bps, bringing the target rate from 5.25-5.50% to 4.75-5.00%. This larger cut surprised many investors who still see inflation risks and a generally strong economy. This move likely kicks off a multi-year period of cuts as the Fed brings interest rates towards what they believe to be a more neutral level. Investors have now focused sharply on what the neutral interest rate level, or “R-star”, might be today.
- The 10-year U.S. Treasury yield fell from 4.36% to 3.79% during the quarter, alongside a series of economic data releases that suggested inflation is moving further towards the Fed’s 2% target, and that the labor market is softening. Interestingly, yields moved slightly higher in late September after the Fed rate cut.
- Most credit indices saw positive returns, rising with the rest of the fixed income universe. However, greater credit risk only provided marginally higher returns, with high yield outperforming investment grade by +0.1%. Bank Loans (S&P/LSTA Leveraged Loan) underperformed other major fixed income indices, as the floating rate nature (and ultra-low duration) of bank loans meant these bonds did not benefit from the decline in yields.
- The U.S. yield curve *uninverted* during the quarter, indicated by the 10-year minus the 2-year Treasury yield, as shorter-term interest rates dropped along with more aggressive Federal Reserve rate cut expectations. This ended more than two years of yield curve inversion.
- Default activity remained low in Q3 as the economy remained strong. High yield bond default rates continued to decline, falling to 1.4%, down from 2.2% a year ago and well below the long-term annual average of 3.4%. However, distressed exchange activity was high. Total distressed credit volume was roughly \$13.5 billion, the second largest quarterly total on record (since Q4 2008).

Glossary

Allocation Effect: An attribution effect that describes the amount attributable to the managers' asset allocation decisions, relative to the benchmark.

Alpha: The excess return of a portfolio after adjusting for market risk. This excess return is attributable to the selection skill of the portfolio manager. Alpha is calculated as: $\text{Portfolio Return} - [\text{Risk free Rate} + \text{Portfolio Beta} \times (\text{Market Return} - \text{Risk free Rate})]$.

Benchmark R squared: Measures how well the Benchmark return series fits the manager's return series. The higher the Benchmark R squared, the more appropriate the benchmark is for the manager.

Beta: A measure of systematic, or market risk; the part of risk in a portfolio or security that is attributable to general market movements. Beta is calculated by dividing the covariance of a security by the variance of the market.

Book to Market: The ratio of book value per share to market price per share. Growth managers typically have low book to market ratios while value managers typically have high book to market ratios.

Capture Ratio: A statistical measure of an investment manager's overall performance in up or down markets. The capture ratio is used to evaluate how well an investment manager performed relative to an index during periods when that index has risen (up market) or fallen (down market). The capture ratio is calculated by dividing the manager's returns by the returns of the index during the up/down market, and multiplying that factor by 100.

Correlation: A measure of the relative movement of returns of one security or asset class relative to another over time. A correlation of 1 means the returns of two securities move in lock step, a correlation of -1 means the returns of two securities move in the exact opposite direction over time. Correlation is used as a measure to help maximize the benefits of diversification when constructing an investment portfolio.

Excess Return: A measure of the difference in appreciation or depreciation in the price of an investment compared to its benchmark, over a given time period. This is usually expressed as a percentage and may be annualized over a number of years or represent a single period.

Information Ratio: A measure of a manager's ability to earn excess return without incurring additional risk. Information ratio is calculated as: excess return divided by tracking error.

Interaction Effect: An attribution effect that describes the portion of active management that is contributable to the cross interaction between the allocation and selection effect. This can also be explained as an effect that cannot be easily traced to a source.

Portfolio Turnover: The percentage of a portfolio that is sold and replaced (turned over) during a given time period. Low portfolio turnover is indicative of a buy and hold strategy while high portfolio turnover implies a more active form of management.

Price to Earnings Ratio (P/E): Also called the earnings multiplier, it is calculated by dividing the price of a company's stock into earnings per share. Growth managers typically hold stocks with high price to earnings ratios whereas value managers hold stocks with low price to earnings ratios.

R Squared: Also called the coefficient of determination, it measures the amount of variation in one variable explained by variations in another, i.e., the goodness of fit to a benchmark. In the case of investments, the term is used to explain the amount of variation in a security or portfolio explained by movements in the market or the portfolio's benchmark.

Selection Effect: An attribution effect that describes the amount attributable to the managers' stock selection decisions, relative to the benchmark.

Sharpe Ratio: A measure of portfolio efficiency. The Sharpe Ratio indicates excess portfolio return for each unit of risk associated with achieving the excess return. The higher the Sharpe Ratio, the more efficient the portfolio. Sharpe ratio is calculated as: $\text{Portfolio Excess Return} / \text{Portfolio Standard Deviation}$.

Sortino Ratio: Measures the risk adjusted return of an investment, portfolio, or strategy. It is a modification of the Sharpe Ratio, but penalizes only those returns falling below a specified benchmark. The Sortino Ratio uses downside deviation in the denominator rather than standard deviation, like the Sharpe Ratio.

Standard Deviation: A measure of volatility, or risk, inherent in a security or portfolio. The standard deviation of a series is a measure of the extent to which observations in the series differ from the arithmetic mean of the series. For example, if a security has an average annual rate of return of 10% and a standard deviation of 5%, then two thirds of the time, one would expect to receive an annual rate of return between 5% and 15%.

Style Analysis: A return based analysis designed to identify combinations of passive investments to closely replicate the performance of funds

Style Map: A specialized form or scatter plot chart typically used to show where a Manager lies in relation to a set of style indices on a two dimensional plane. This is simply a way of viewing the asset loadings in a different context. The coordinates are calculated by rescaling the asset loadings to range from -1 to 1 on each axis and are dependent on the Style Indices comprising the Map.

This report contains confidential and proprietary information and is subject to the terms and conditions of the Consulting Agreement. It is being provided for use solely by the customer. The report may not be sold or otherwise provided, in whole or in part, to any other person or entity without written permission from Verus Advisory, Inc., (hereinafter Verus) or as required by law or any regulatory authority. The information presented does not constitute a recommendation by Verus and cannot be used for advertising or sales promotion purposes. This does not constitute an offer or a solicitation of an offer to buy or sell securities, commodities or any other financial instruments or products.

The information presented has been prepared using data from third party sources that Verus believes to be reliable. While Verus exercised reasonable professional care in preparing the report, it cannot guarantee the accuracy of the information provided by third party sources. Therefore, Verus makes no representations or warranties as to the accuracy of the information presented. Verus takes no responsibility or liability (including damages) for any error, omission, or inaccuracy in the data supplied by any third party. Nothing contained herein is, or should be relied on as a promise, representation, or guarantee as to future performance or a particular outcome. Even with portfolio diversification, asset allocation, and a long-term approach, investing involves risk of loss that the investor should be prepared to bear.

The information presented may be deemed to contain forward-looking information. Examples of forward looking information include, but are not limited to, (a) projections of or statements regarding return on investment, future earnings, interest income, other income, growth prospects, capital structure and other financial terms, (b) statements of plans or objectives of management, (c) statements of future economic performance, and (d) statements of assumptions, such as economic conditions underlying other statements. Such forward-looking information can be identified by the use of forward looking terminology such as believes, expects, may, will, should, anticipates, or the negative of any of the foregoing or other variations thereon comparable terminology, or by discussion of strategy. No assurance can be given that the future results described by the forward-looking information will be achieved. Such statements are subject to risks, uncertainties, and other factors which could cause the actual results to differ materially from future results expressed or implied by such forward looking information. The findings, rankings, and opinions expressed herein are the intellectual property of Verus and are subject to change without notice. The information presented does not claim to be all-inclusive, nor does it contain all information that clients may desire for their purposes. The information presented should be read in conjunction with any other material provided by Verus, investment managers, and custodians.

Verus will make every reasonable effort to obtain and include accurate market values. However, if managers or custodians are unable to provide the reporting period's market values prior to the report issuance, Verus may use the last reported market value or make estimates based on the manager's stated or estimated returns and other information available at the time. These estimates may differ materially from the actual value. Hedge fund market values presented in this report are provided by the fund manager or custodian. Market values presented for private equity investments reflect the last reported NAV by the custodian or manager net of capital calls and distributions as of the end of the reporting period. These values are estimates and may differ materially from the investments actual value. Private equity managers report performance using an internal rate of return (IRR), which differs from the time-weighted rate of return (TWRR) calculation done by Verus. It is inappropriate to compare IRR and TWRR to each other. IRR figures reported in the illiquid alternative pages are provided by the respective managers, and Verus has not made any attempts to verify these returns. Until a partnership is liquidated (typically over 10-12 years), the IRR is only an interim estimated return. The actual IRR performance of any LP is not known until the final liquidation.

Verus receives universe data from InvMetrics, eVestment Alliance, and Morningstar. We believe this data to be robust and appropriate for peer comparison. Nevertheless, these universes may not be comprehensive of all peer investors/managers but rather of the investors/managers that comprise that database. The resulting universe composition is not static and will change over time. Returns are annualized when they cover more than one year. Investment managers may revise their data after report distribution. Verus will make the appropriate correction to the client account but may or may not disclose the change to the client based on the materiality of the change.
